About This Manual

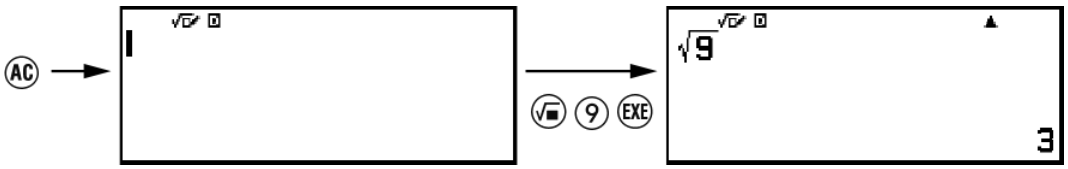

- In no event shall CASIO Computer Co., Ltd. be liable to anyone for special, collateral, incidental, or consequential damages in connection with or arising out of the purchase or use of this product and items that come with it. Moreover, CASIO Computer Co., Ltd. shall not be liable for any claim of any kind whatsoever by any other party arising out of the use of this product and the items that come with it.
- The contents of this manual are subject to change without notice.
- The displays and illustrations (such as key markings) shown in this manual are for illustrative purposes only, and may differ somewhat from the actual items they represent.
- QR Code is a registered trademark of DENSO WAVE INCORPORATED in Japan and in other countries.
- Company and product names used in this manual may be registered trademarks or trademarks of their respective owners.

Key Operations

The example below shows how key operations are represented in this manual.

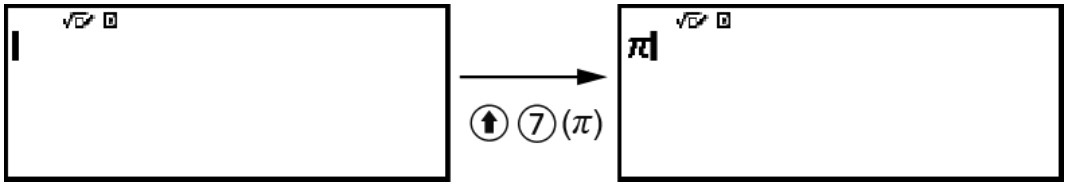

Example 1: (AC) (√) (9) (EXE)

Keys should be pressed in the sequence shown above (left to right).

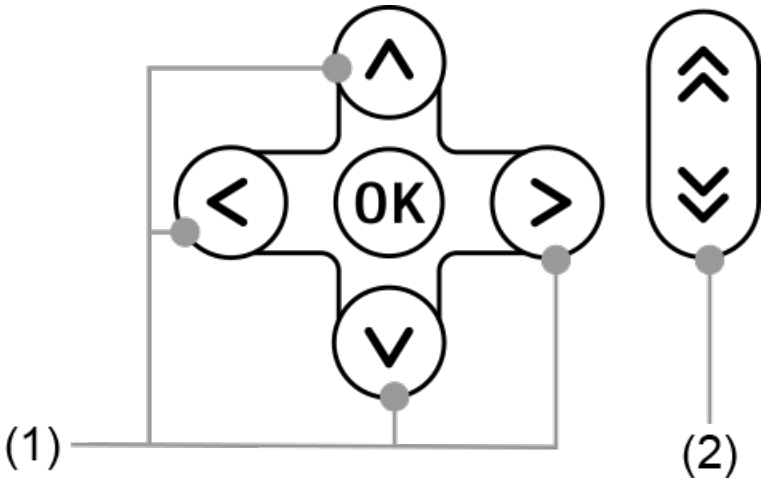

Example 2: (Shift) (7) (π)*

The above indicates you should press (Shift) and then (7), which will input a π symbol. All multiple-key input operations are indicated like this. Key cap markings are shown, followed by the input character or command in parentheses.

* Refer to "Key Markings" (page 12) for more information about the key symbols used in this example.

Example 3: ⓐ, ⓥ, ⓒ, ⓑ, ⓔ, ⓕ

- Individual cursor keys indicated by (1) are represented as ⓐ, ⓥ, ⓒ, ⓑ.
- Individual page scroll keys indicated by (2) are represented as ⓔ, ⓕ.

Menu Operations

Some operations in this manual use a simplified form of menu operations, as shown in the examples below.

Example 1

ⓜ – [Other] > [π]

or

Press ⓜ, and then select [Other] > [π].

Actual Operation 1

1. Press ⓜ. 2. Use ⓐ and ⓥ to select [Other], and then press ⓞⓚ. 3. Use ⓐ and ⓥ to select [π], and then press ⓞⓚ.

Example 2

ⓗ - Calculate

or

Press ⌂, select the Calculate app icon, and then press OK.

Actual Operation 2

1. Press ⌂.
2. Use the cursor keys (^, v, <, >) to select the Calculate app icon, and then press OK.

OK Key and EXE Key

The OK key and EXE key perform the same operation. In this manual, OK is used for selecting or applying a setting, while EXE is used for executing a calculation. Note, however, that it makes no difference whether you press OK or EXE for operations where either OK or EXE is shown.

Examples

If you are not instructed to use a specific calculator app or to configure particular settings for an example operation, the app and settings below are assumed.

Calculator app: Calculate

Settings: Initial default calculator settings

For information about returning the calculator to its initial default settings, see "Initializing the Calculator" (page 6).

Initializing the Calculator

Important!

- The procedure below initializes all calculator settings, except for Contrast and Auto Power Off. Also clears all data stored in calculator memory.

1. Press ⌂ to display the HOME screen.
2. Use the cursor keys (^, v, <, >) to select a calculator app icon, and then press OK.
3. Press ☰, and then select [Reset] > [Initialize All] > [Yes].
   - This displays the HOME screen.

Calculator "Get Started" Screen

While the HOME screen is displayed, pressing the ☰ key will display the "Get Started" screen, which includes the information below.

- QR Code for accessing the "Get Started" webpage of the Worldwide Education Service (**https://wes.casio.com/calc/cw/**)
  The Get Started webpage gives you access to the User's Guide and other related information to help you get started with your calculator.
- Calculator ID number (24-character string)

Press ⎋ to return to the HOME screen.

Note

- You can also display the Get Started screen, by selecting it from the SETTINGS menu.
  See **"Using the SETTINGS Menu" (page 17)**.

Precautions

Safety Precautions

Thank you for purchasing this CASIO product.
Be sure to read the "Safety Precautions" before using this product to ensure that you use it correctly. Be sure to keep all user documentation handy for future reference.

Danger
Indicates something that creates the major risk of death or serious personal injury.

■ Button Type and Coin Type Battery Precautions (fx-85CW only)

Take care to ensure that a battery will not be swallowed accidentally.
Particular care is required to keep batteries away from children.

Should a battery be swallowed accidentally or if there is a possibility that a battery has been swallowed, immediately contact a physician. Swallowing a battery can result in chemical burns, mucosal tissue penetration, and other serious problems that create the risk of death.

Warning
Indicates something that creates the risk of death or serious personal injury.

■ Display Screen

Do not press the LCD or subject it to strong impact.

Doing so can cause the LCD glass to crack, creating the risk of personal injury.

Should the LCD become cracked, never touch any of the liquid inside.

LCD liquid getting on the skin creates the risk of skin irritation.
Should LCD liquid get into your mouth, immediately rinse your mouth out and contact your physician.
Should LCD liquid get in your eyes or on your skin, rinse with clean water and then contact your physician.

■ Battery Precautions

Should fluid leaking from a battery get on your skin or clothing, immediately rinse it off with clean water.

Battery fluid getting into the eyes creates the risk of eyesight loss, etc. Rinse the eyes and then immediately contact a physician.

Caution

Indicates something that creates the risk of minor personal injury or physical damage.

Observe the precautions below. Failure to do so can cause a battery to rupture, creating the risk of fire, personal injury, and soiling of nearby objects by leaking fluid.

- Do not try to take a battery apart and never allow a battery to become shorted.
- Do not charge a non-rechargeable battery.
- Do not expose a battery to heat or throw it into fire.

- Use only the specified type of battery.
- Load a battery with its poles (plus (+) and minus (–)) facing correctly.
- Replace the battery as soon as possible after it goes dead.

Battery Precautions

Observe the precautions below. Failure to do so can cause the battery to explode or leak flammable liquid or gas.

- Use only the type of battery that is specified for this product.
- Do not burn a battery or dispose of it in an incinerator, or by mechanical crushing or cutting.
- Do not subject a battery to excessively high or low temperatures during use, storage, or transport.
- Do not subject a battery to excessively low barometric pressure during use, storage, or transport.

Handling Precautions

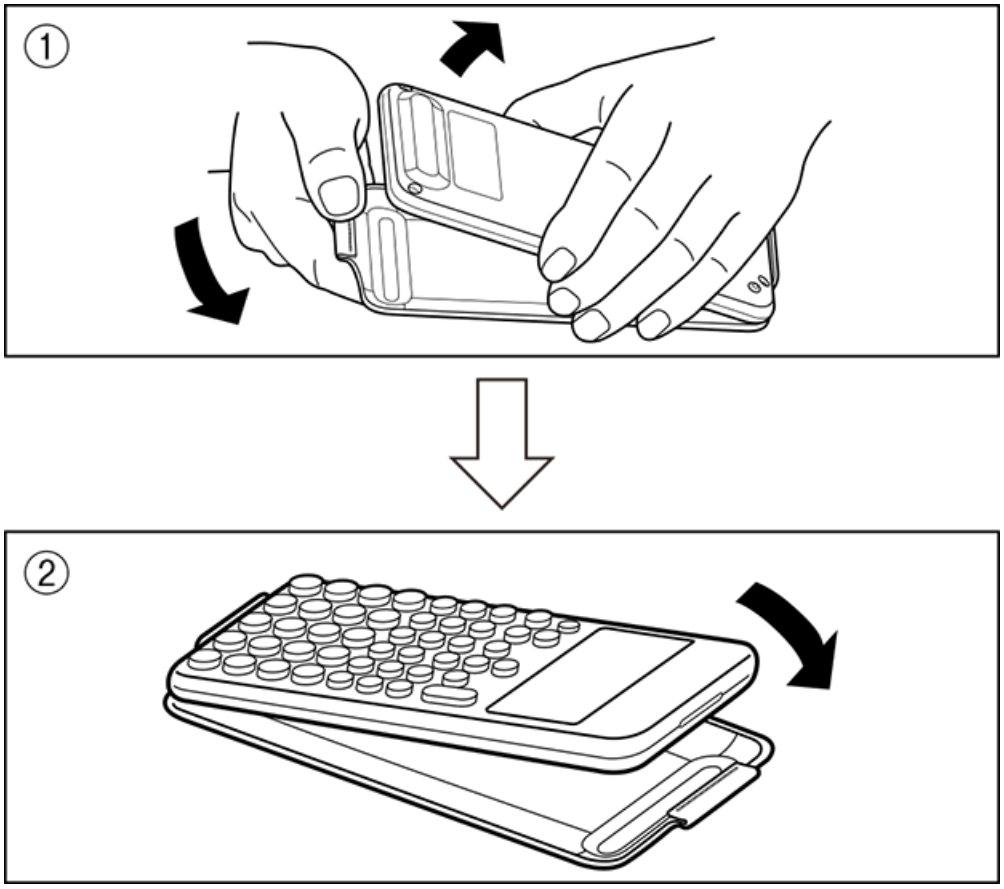

- fx-82CW/fx-350CW: Even if the calculator is operating normally, replace the battery at least once every two years (R03).
  fx-85CW: Even if the calculator is operating normally, replace the battery at least once every two years (LR44).
  A dead battery can leak, causing damage to and malfunction of the calculator. Never leave a dead battery in the calculator. Do not try using the calculator while the battery is completely dead (fx-85CW).
- You will be charged for malfunction or damage due to battery leakage, which is not covered by the warranty.
- The battery that comes with the calculator discharges slightly during shipment and storage. Because of this, it may require replacement sooner than the normal expected battery life.
- Avoid use and storage of the calculator in areas subjected to temperature extremes, and large amounts of humidity and dust.
- Do not subject the calculator to excessive impact, pressure, or bending.
- Never try to take the calculator apart.
- Use a soft, dry cloth to clean the exterior of the calculator.
- Whenever discarding the calculator or batteries, be sure to do so in accordance with the laws and regulations in your particular area.

Getting Started

Attaching and Removing the Front Cover

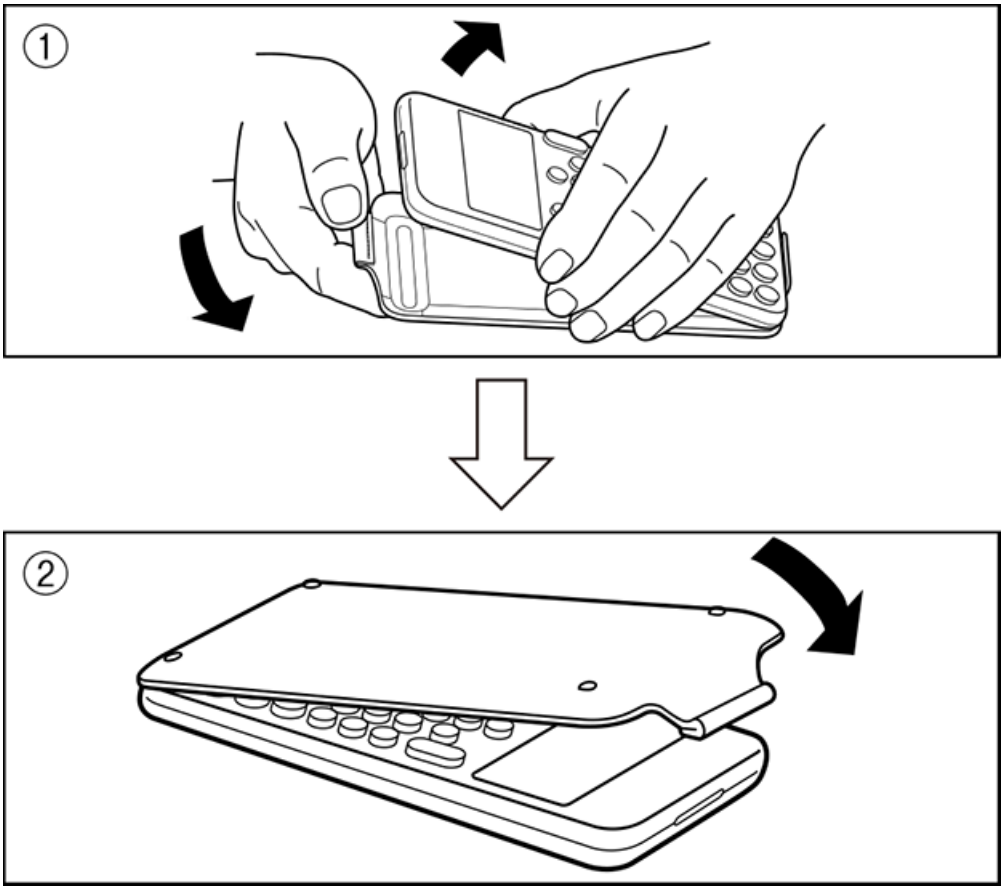

To remove the front cover

Before using the calculator, remove the front cover (①) and attach it to the back (②).

To attach the front cover

When you are not using the calculator, remove the front cover (①) and attach it to the front (②).

Important!

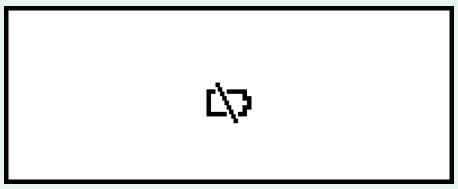

- Always attach the front cover to the calculator whenever you are not using it. Otherwise, accidental operation of the ⏻ key can cause the power to turn on and run down the battery.

Turning Power On and Off

Press ⏻ to turn on the calculator.
Press ⇧ AC (OFF) to turn off the calculator.

Note

- To turn on power, long-press ⏻. To avoid turning on power accidentally, the top of ⏻ key is slightly lower than the other keys.
- If the screen shown below appears right after you turn on power, it means that remaining battery power is low.

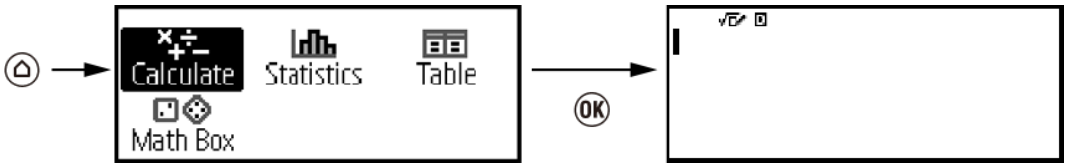

If this screen appears, replace the battery as soon as possible. For details about battery replacement, see **"Replacing the Battery" (page 86)**.

- The calculator also will turn off automatically after approximately 10 minutes or 60 minutes of non-use. Press the ⏻ key to turn the calculator back on.

HOME Screen

Pressing ⌂ displays the HOME screen. The HOME screen shows a list of installed calculator apps.

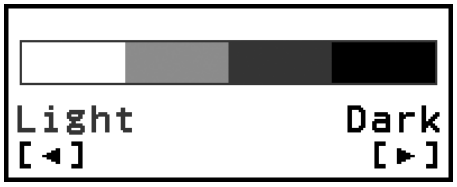

HOME Screen　　Calculate App Screen

For information about installed calculator apps, see **"Installed Calculator App List" (page 16)**.

Adjusting Display Contrast

1. Press ⌂, select a calculator app icon, and then press OK.
2. Press ☰, and then select [System Settings] > [Contrast].

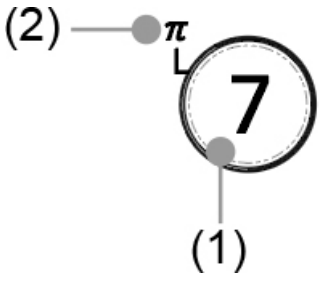

3. Use < and > to adjust display contrast.
4. After the setting is the way you want, press AC.

Important!

- If adjusting display contrast does not improve display readability, it probably means that battery power is low. Replace the battery.

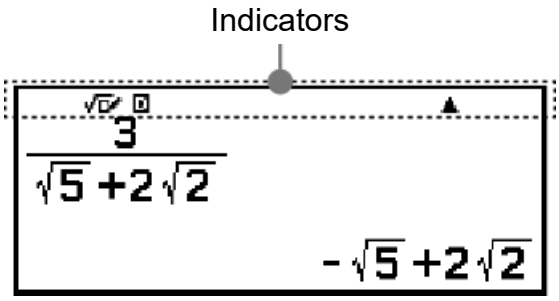

Key Markings

Pressing the ⇧ key followed by a second key performs the alternate function of the second key. The alternate function is indicated by the text printed above the key, on the left.

(1) Keycap function: 7
(2) Alternate function: ⇧ 7 (π)

Indicators

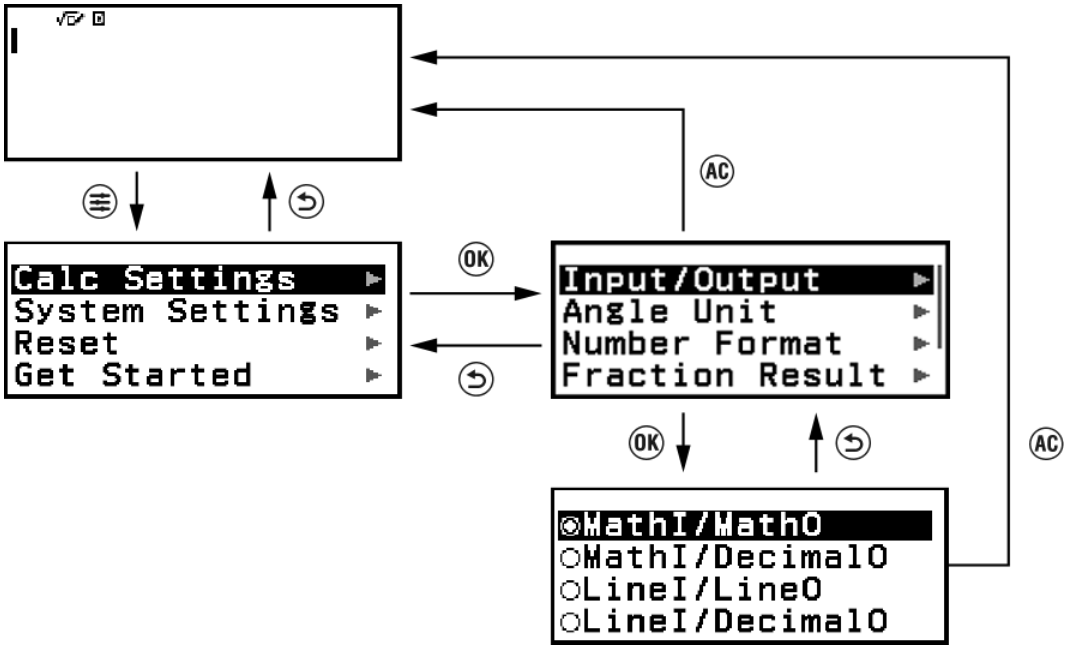

The table below describes indicators that appear at the top of the screen.

This indicator:	Means this:
S	The keypad has been shifted by pressing the ⓘ key. The keypad will unshift and this indicator will disappear when you press a key.
√▭	MathI/MathO or MathI/DecimalO is selected for Input/Output on the SETTINGS menu.
D / R / G	Current setting of Angle Unit (D: Degree, R: Radian, or G: Gradian) on the SETTINGS menu.
FIX	A fixed number of decimal places is in effect.
SCI	A fixed number of significant digits is in effect.
▲ / ▼	There is previous (▲) or following (▼) calculation history for the currently displayed calculation result.
☀	Calculator is being powered directly by its solar cells, either entirely or in some combination with the battery. (fx-85CW only)

Using Menus

Many of the operations of your calculator are performed using menu screens. The example below shows operations starting from the menu screen that appears when you press ☰.

Selecting a Menu Item

To select a menu item, use the cursor keys (▲, ▼, ◀, ▶) to highlight it and then press [OK]. Note that ◀ and ▶ are used only when there are multiple menu item columns.

Navigating Between Menu Hierarchies

The "▶" indicator to the right of a menu item means that there are lower hierarchy levels under that item. Selecting the menu item and pressing [OK] or ▶ navigates the next lower level of the hierarchy. To return to the next upper level of the hierarchy, press ↩.

Note

- If you are in a lower level of the hierarchy of a one-column menu, you can press ◀ in addition to ↩ to return to the next higher level.

Selecting a Menu Item with a Radio Button (○/◉)

When the display shows a list of multiple options, each option will have a radio button (○ or ◉) to its left. ◉ indicates the currently selected option.

To configure the setting of a radio button menu item

1. Highlight the applicable menu item and then press [OK].
   - What happens next depends on the type of menu item you selected.
     - If there are no more settings to configure for the menu item you selected, the radio button next to it will change to ◉.

- The menu item you selected has more settings to configure, a screen for selecting the menu item setting will appear. In this case, proceed to step 2.

2. On the setting screen, highlight the setting you want and then press [OK].
   • This returns to the menu item screen in step 1, with the radio button next to the menu item you previously selected changed to ◉.

Scrolling Between Screens

A scroll bar will appear along the right side of the display when there are so many menu items that they do not fit on one screen.

• Use [⏫] and [⏬] to scroll between screens.
• Use [∧] and [∨] to scroll line-by-line.

To close the menu and return to the screen displayed before the menu

Press [AC].

Note

• You can close a menu displayed by pressing [≡], [⇄], [f(x)], [▭], [○○○], or [FORMAT] by pressing [AC]. If the displayed menu is one that appears immediately after launching a particular calculator app or if it is an app-specific menu, you cannot close it by pressing [AC]. In that case, you must press [↩] to close the menu.

Calculator Apps and Menus

Calculator Apps

Selecting a Calculator App

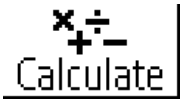

Select a calculator app that is suitable for the type of calculation you want to perform.

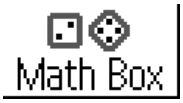

1. Press ⌂ to display the HOME screen.
   - For information about each calculator app, see the "Installed Calculator App List" (page 16).

2. Use the cursor keys (^, v, <, >) to select the calculator app icon you want.
3. Press OK to display the initial screen of the calculator app whose icon you selected.

Installed Calculator App List

Icon	Description
 (Calculate)	General calculations
 (Statistics)	Statistical and regression calculations
 (Table)	Generates a number table based on one or two functions

 (Math Box)	The following functions to support math learning. Dice Roll, Coin Toss: Probability simulation

Using the SETTINGS Menu

To display the SETTINGS menu, press ☰ while using a calculator app.
The SETTINGS menu includes the menu items below.

Calc Settings	Includes menu items for configuring calculation settings, such as the display format for calculation results.
System Settings	Includes menu items for configuring calculator operation settings, such as contrast adjustment.
Reset	Includes menu items for performing various types of reset operations.
Get Started	Displays the Get Started screen. For more information, see **"Calculator "Get Started" Screen" (page 6)**.

Note

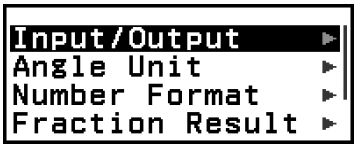

- Pressing ☰ while the HOME screen is displayed will display the Get Started screen instead of the SETTINGS menu.
- Depending on the screen displayed by the calculator app, pressing ☰ may not display the SETTINGS menu.

Changing Calculator Settings

1. Press ⌂, select a calculator app icon, and then press OK.
2. Press ☰ to display the SETTINGS menu.

3. Use ⓐ and ⓥ to select Calc Settings or System Settings, and then press ⓞⓚ.
   - This displays a list of setting items included on the selected menu. The screen here shows an example of what appears when [Calc Settings] is selected.

   - See **"Items and Available Setting Options" (page 18)** for the setting items included for [Calc Settings] and [System Settings].
4. Use ⓐ and ⓥ to highlight the item whose setting you want to change, and then press ⓞⓚ.
   - This displays a list of setting options for the item you selected. The screen here shows an example of what appears when [Input/Output] is selected.

5. Use ⓐ and ⓥ to highlight the option you want, and then press ⓞⓚ.
6. After the setting is the way you want, press ⓐⓒ.

Items and Available Setting Options

"◆" indicates the initial default setting.

Calc Settings > Input/Output

Specifies the format to be used by the calculator for expression input and calculation result output.

MathI/MathO◆	Input: Natural Textbook; Output: Format that includes a fraction, √, and/or π*1
MathI/DecimalO	Input: Natural Textbook; Output: Converted to decimal value
LineI/LineO	Input: Linear*2; Output: Decimal or fraction
LineI/DecimalO	Input: Linear*2; Output: Converted to decimal value

*1 Decimal output is applied when these formats cannot be output for some reason.

*2 All calculations, including fractions and functions are input in a single line. Same output format as that for models without Natural Textbook Display (S-V.P.A.M. models, etc.)

Input/output format display examples:

MathI/MathO (initial default setting)	
MathI/DecimalO (Number Format: Norm 1)	
(Number Format: Norm 2)	
LineI/LineO	
LineI/DecimalO (Number Format: Norm 1)	

Calc Settings > Angle Unit

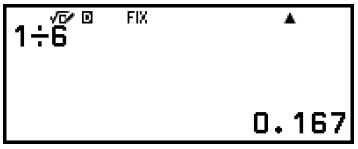

Degree◆; Radian; Gradian
Specifies degree, radian or gradian as the angle unit for value input and calculation result display.

Calc Settings > Number Format

Specifies the number of digits for display of a calculation result.
Fix: The value you specify (from 0 to 9) controls the number of decimal places for displayed calculation results. Calculation results are rounded off to the specified digit before being displayed.

Example: 1 ÷ 6
(Fix 3)

1 ÷ 6 ⇧ EXE (≈)*

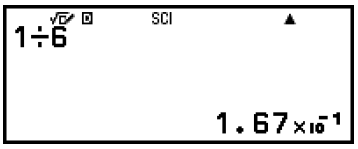

Sci: The value you specify (from 1 to 10) controls the number of significant digits for displayed calculation results. Calculation results are rounded off to the specified digit before being displayed.

Example: 1 ÷ 6

(Sci 3)

1 ÷ 6 ⇧ EXE (≈)*

Norm: Displays calculation results in exponential format when they fall within the ranges below.

Norm 1◆: $10^{-2} > |x|, |x| \geq 10^{10}$, Norm 2: $10^{-9} > |x|, |x| \geq 10^{10}$

Example: 1 ÷ 200

(Norm 1)

1 ÷ 200 ⇧ EXE (≈)*

(Norm 2)

1 ÷ 200 ⇧ EXE (≈)*

* Pressing ⇧ EXE (≈) instead of EXE after inputting a calculation will display the calculation result in decimal form.

Calc Settings > Fraction Result

Mixed Fraction; Improp Fraction◆

Specifies either mixed fraction or improper fraction for display of fractions in calculation results.

Calc Settings > Decimal Mark

Dot◆; Comma

Specifies whether to display a dot or a comma for the calculation result decimal mark. A dot is always displayed during input. When dot is selected

as the decimal mark, the separator for multiple results is a comma (,). When comma is selected, the separator is a semicolon (;).

Calc Settings > Digit Separator

On; Off◆
Specifies whether or not a separator character should be used in calculation results.

System Settings > Contrast

See **"Adjusting Display Contrast" (page 12)**.

System Settings > Auto Power Off

10 Min.◆; 60 Min.
Specify the amount of time until Auto Power Off is triggered.

System Settings > MultiLine Font

Normal Font◆; Small Font
Specifies the display font size when LineI/LineO or LineI/DecimalO is selected for Input/Output. Up to four lines can be displayed while Normal Font is selected, and up to six lines can be displayed with Small Font.

System Settings > QR Code

Specifies the version of the QR Code displayed when ⓐⓧ(QR) is pressed.
Version 3: Indicates QR Code Version 3.
Version 11◆: Indicates QR Code Version 11.

Reset > Settings & Data

See **"To initialize calculator settings" (page 22)**.

Reset > Variable Memory

See **"Clearing the Contents of All Memories" (page 35)**.

Reset > Initialize All

See "Initializing the Calculator" (page 6).

Get Started

See "Calculator "Get Started" Screen" (page 6).

To initialize calculator settings

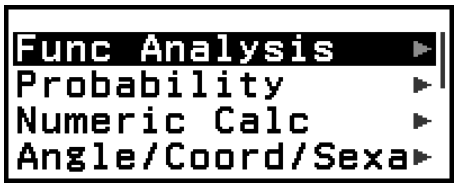

Important!

- The procedure below initializes all calculator settings, except for Contrast and Auto Power Off. Also clears all data except for variable memory and Ans data.

1. Press ⌂, select a calculator app icon, and then press OK.
2. Press ☰, and then select [Reset] > [Settings & Data] > [Yes].
   - This displays the HOME screen.

Using the CATALOG Menu

Press ⌨ to display the CATALOG menu. This menu shows categories of the commands, functions, and symbols in accordance with the calculator app you are currently using and the current status (displayed screen or current settings) of the app.

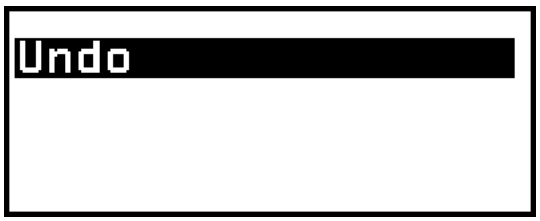

Example: CATALOG menu of the Calculate app

Note

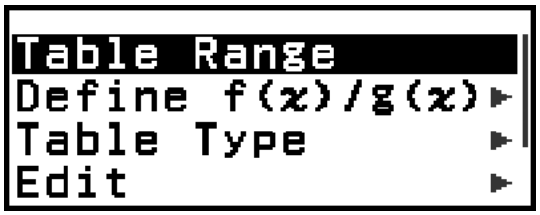

- For information about how to input commands, functions, and symbols from the CATALOG menu, see "Advanced Calculations" (page 43).
- For information about the commands, functions, and symbols specific to each calculator app, refer to the calculator app descriptions in "Using Calculator Apps" (page 56).

Using the TOOLS Menu

The TOOLS menu that appears when you press ⋯ includes menu items for performing functions specific to each calculator app and for configuring settings.

Example: TOOLS menu for the Calculate app

Examples: TOOLS menu for the Table app

Note

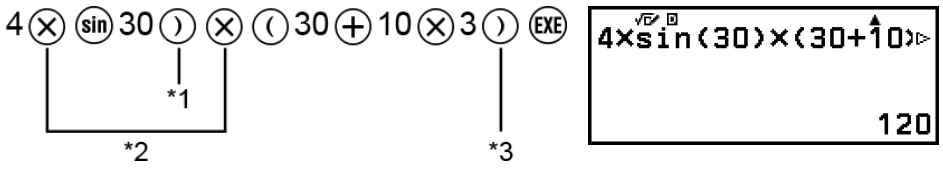

- The menu items below are common to multiple calculator apps.
  - Undo (See **"Undo Operations" (page 26)**.)

Inputting Expressions and Values

Basic Input Rules

When you press [EXE] the priority sequence of the input calculation will be evaluated automatically and the result will appear on the display.

4 × sin 30 × (30 + 10 × 3) = 120

*1 Input of the closing parenthesis is required for sin and other functions that include parentheses.

*2 These multiplication symbols (×) can be omitted.

*3 The closing parenthesis immediately before the [EXE] operation can be omitted.

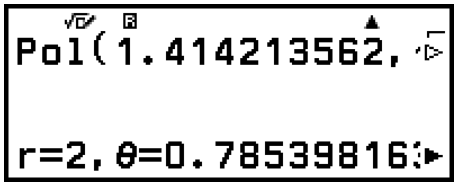

Moving the Cursor to the Beginning or End of an Input Expression

While inputting an expression, you can press [▲] to make the cursor jump to the beginning of the expression or [▼] to jump to the end of the expression.

Input Expression and Calculation Result "More" Indicator (▶, ▷)

If you see a pointer (▶ or ▷) symbol on the right side of either an input expression line or calculation result line, it means the displayed line continues to the right. Use [◀] and [▶] to scroll the line left and right.

- When you see ▶ at the right end of a calculation result line, you can jump to the end of the result by pressing [▼]. To jump to the beginning of a calculation result line, press [▲].
- Note that if you want to scroll the input expression while both the ▶ and ▷ indicators are displayed, you will need to press [↩] or [AC] first and then use [◀] and [▶] to scroll.

Parentheses Auto Complete

If you execute a calculation that includes both division and multiplication operations in which a multiplication sign has been omitted, parentheses will be inserted automatically as shown in the examples below.

- When a multiplication sign is omitted immediately before an open parenthesis or after a closing parenthesis.
  Example: 6 ÷ 2(1 + 2) → 6 ÷ (2(1 + 2))
- When a multiplication sign is omitted immediately before a variable, a constant, etc.
  Example: 6 ÷ 2π → 6 ÷ (2π)

Input Limit Indication

The cursor will change shape to ■ when there are 10 bytes or less of allowed input remaining. If this happens, end calculation input and then press [EXE].

Inputting an Expression Using Natural Textbook Format (MathI/MathO or MathI/DecimalO Only)

Expressions that include fractions and/or special functions such as $\sqrt{}$ can be input in natural textbook format by using templates that appear when certain keys are pressed, or when you input certain functions from the CATALOG menu.

Example: $3\frac{1}{2} + 5\frac{3}{2}$

1. Press [Shift][Menu](■□/□).
   • This inputs a mixed fraction template.

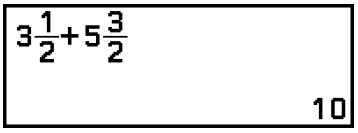

2. Input values into the integer, numerator, and denominator areas of the template.

3[→]1[↓]2

3. Do the same to input the remainder of the expression.

(▶)(+)(⬆)(⌨)(■⇆)5(▶)3(▼)2(EXE)

Note

- While the input cursor is located within the input area of a template (mixed fractions), pressing (⬆)(▶) jumps to the position immediately following (to the right of) the template, while pressing (⬆)(◀) jumps to the position immediately before (to the left of) it.
- You can always tell the current location of the cursor within a template because the blank framed area or the characters where it is located will be dark black. Everything else in the calculation expression will be dark gray.

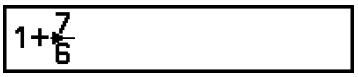

Undo Operations

To undo the last key operation, press (○○○), select [Undo], and then press (OK).
To redo a key operation you have just undone, press (○○○), select [Undo], and then press (OK) again.

Using Values and Expressions as Arguments

Example: To input $1 + \frac{7}{6}$ and then change it to $1 + \sqrt{\frac{7}{6}}$

1(+)7(⌨)6(◀)(◀)(⬆)(⌫)(INS)

(√)

Pressing (⬆)(⌫)(INS) in the above example causes $\frac{7}{6}$ to be the argument of the function input by the next key operation (√).

Overwrite Input Mode (LineI/LineO or LineI/DecimalO Only)

In the overwrite mode, text you input replaces the text at the current cursor location. You can toggle between the insert and overwrite modes by performing the operation: (⬆)(⌫)(INS). The cursor appears as "▌" in the insert mode and as "▁" in the overwrite mode.

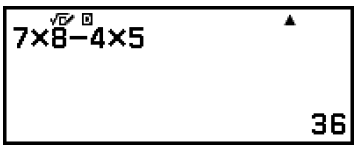

Basic Calculations

Arithmetic Calculations

Use the ⊕, ⊖, ⊗, and ÷ keys to perform arithmetic calculations.

Example: 7 × 8 - 4 × 5 = 36

7⊗8⊖4⊗5EXE

Fraction Calculations

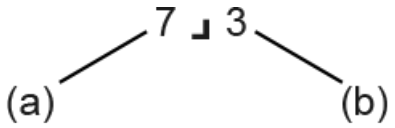

Note that the input method for fractions depends on the current Input/Output setting on the SETTINGS menu.

To input $\frac{7}{3}$ (improper fraction)

(Input/Output: MathI/MathO or MathI/DecimalO)

▤7▽3 or 7▤3	$\frac{7}{3}$

(Input/Output: LineI/LineO or LineI/DecimalO)

7▤3	

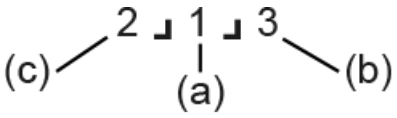

(a) Numerator, (b) Denominator

To input $2\frac{1}{3}$ (mixed fraction)

(Input/Output: MathI/MathO or MathI/DecimalO)

↑▤(■吕)2▷1▽3	$2\frac{1}{3}$

(Input/Output: LineI/LineO or LineI/DecimalO)

2⑨1⑨3	

(a) Numerator, (b) Denominator, (c) Integer Part

Example: $\frac{2}{3} + 1\frac{1}{2} = \frac{13}{6}$

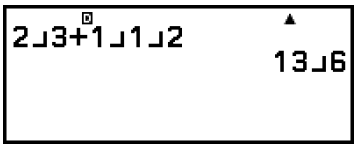

(Input/Output: MathI/MathO)

2⑨3▷+▲⑨(-)1▷1▽2⑭

(Input/Output: LineI/LineO)

2⑨3+1⑨1⑨2⑭

Note

- Fractions in calculation results are displayed after being reduced to their lowest terms.

To convert a calculation result format to improper fraction or mixed fraction, press ㉓. For more information, see **"Improper Fraction and Mixed Fraction Conversion" (page 39)**.

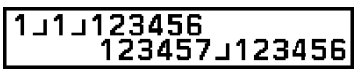

Fraction Format Calculation Results

A calculation result whose total number of mixed fraction number of digits (including integer, numerator, denominator, and separator symbol ⌟) is greater than 10 cannot be displayed using fraction format. In this case, the calculation result is displayed as a decimal value.

Example 1: 1⌟1⌟123456 = 123457⌟123456

(Input/Output: LineI/LineO)

1⑨1⑨123456⑭

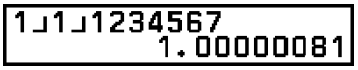

Since the total number of digits of the value 1⌟1⌟123456 is 10, the result is displayed as a fraction value.

Example 2: 1⌟1⌟1234567 (= 1234568⌟1234567) = 1.00000081

(Input/Output: LineI/LineO)

1(ab/c)1(ab/c)1234567(EXE)

Since the total number of digits of the value 1⌟1⌟1234567 is 11, the result is displayed as a decimal value.

Note

- Mixing fractions and decimal values in a calculation while something other than MathI/MathO is selected will cause the result to be displayed as a decimal value.

Powers, Power Roots, and Reciprocals

Use the keys below to input power functions, power root functions, and reciprocal function.
Power functions: (x²)(square), (x□)(n^{th} power)
Power root functions: (√)(square root), (Shift)(√)($\sqrt[\square]{\square}$) (n^{th} root)
Reciprocal function: (Shift)(x□) (x^{-1})

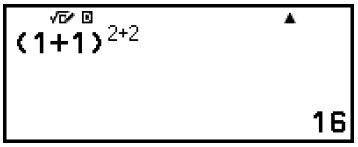

Example 1: $(5^2)^3 = 15625$

((5)(x²))(x□)3(EXE)

Example 2: $(1 + 1)^{2+2} = 16$

((1)(+)1)(x□)2(+)2(EXE)

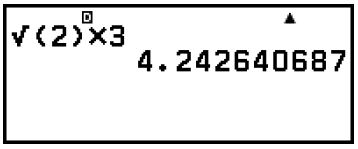

Example 3: $\sqrt{2} \times 3 = 3\sqrt{2} = 4.242640687...$
(Input/Output: MathI/MathO)

(√)2(>)(×)3(EXE)

(Input/Output: LineI/LineO)

√2)×3 EXE

Example 4: $\sqrt[5]{32} = 2$

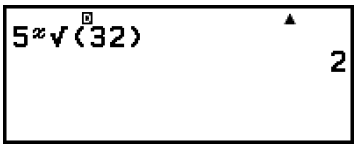

(Input/Output: MathI/MathO)

SHIFT √ (▪√□) 5 > 32 EXE

(Input/Output: LineI/LineO)

5 SHIFT √ (▪√□) 32) EXE

Example 5: $10^{-1} = \frac{1}{10}$

(Input/Output: MathI/MathO)

10 SHIFT ▪□ (▪$^{-1}$) EXE

×10^ Key (Power of 10)

Pressing the ×10^ key is the same as pressing × 1 0 SHIFT ▪□. Both operations input "×10□" (MathI/MathO or MathI/DecimalO) or "×10^(" (LineI/LineO or LineI/DecimalO).

Example: $1.23 \times 10^3 = 1230$

1 . 23 ×10^ 3 EXE

√ Form Calculation Range

The allowable display ranges of the √ form calculation result are shown below.

$\pm a\sqrt{b}$, $\pm d \pm a\sqrt{b}$, $\pm \frac{a\sqrt{b}}{c} \pm \frac{d\sqrt{e}}{f}$

$1 \le a < 100$, $1 < b < 1000$, $1 \le c < 100$

$0 \le d < 100$, $0 \le e < 1000$, $1 \le f < 100$

Example:

- $10\sqrt{2} + 15 \times 3\sqrt{3} = 45\sqrt{3} + 10\sqrt{2}$ ... Displayed in $\sqrt{\ }$ form
- $99\sqrt{999}$ $(= 297\sqrt{111}) = 3129.089165$ ... Displayed as a decimal value

Pi, Natural Logarithm Base e

Pi

Input π by pressing ⏫⑦(π).
π is displayed as 3.141592654, but π = 3.141592653589793238 4626 is used for internal calculations.

Natural Logarithm Base e

Input e by pressing ⏫⑧(e).
Natural Logarithm Base e is displayed as 2.718281828, but e = 2.718281828459045235 3602 is used for internal calculations.

Calculation History and Replay

Calculation History

An ▲ and/or ▼ at the top of the screen indicates more calculation history content above and/or below. You can scroll through calculation history contents using ⏶ and ⏷.

Calculation history can be used only in the Calculate app.

Example

2 + 2 = 4

2⊕2EXE

3 + 3 = 6

3⊕3EXE

⏶
(Scrolls back.)

Note

- Calculation history data is all cleared whenever you press ⏻ or ⌂, when you change the Input/Output setting, or whenever you perform a Reset operation ("Settings & Data" or "Initialize All").

Replay

While a calculation result is on the display, you can press ◁, ▷ or ↩ to edit the expression you used for the previous calculation.

Example

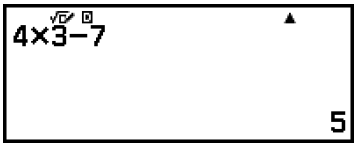

4 × 3 + 2 = 14

4 ⊗ 3 ⊕ 2 EXE

4 × 3 - 7 = 5

(Continuing) ◁ DEL DEL ⊖ 7 EXE

Note

- If ◀ (left) or ▶ (right) is displayed on either end or both ends of a calculation result line, you can use ◁ and ▷ to scroll the line left and right. If this happens, press ↩ or AC first, and then use ◁ and ▷ to edit the expression.

Using Memory Functions

Answer Memory (Ans)

The last calculation result obtained is stored in Ans (answer) memory.

Using Ans Memory to Perform a Series of Calculations

Example: To divide the result of 3 × 4 by 30

3 ⊗ 4 EXE

(Continuing) ÷ 30 EXE

Inputting Ans Memory Contents into an Expression

Example: To perform the calculations shown below:

123 + 456 = 579　　789 - 579 = 210

123 ⊕ 456 EXE

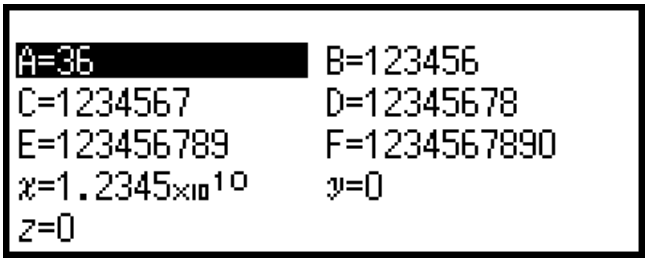

(Continuing) 789 ⊖ Ans EXE

Variables (A, B, C, D, E, F, *x*, *y*, *z*)

You can store values to variables and use the variables in calculations.

Variable List Screen

Pressing ⇄ displays a screen that shows the values currently stored to variables A, B, C, D, E, F, *x*, *y*, and *z*. On this screen, values are always displayed using the "Norm 1" Number Format. To close the screen, press ↩ or AC.

Example 1: To store the result of 3 + 5 to variable A

1. Execute the calculation.

3 ⊕ 5 EXE

2. Press ⇄, and then select [A=] > [Store].
   - This stores the result of 3 + 5 (which is 8) to variable A.
3. Press ⇄.

Example 2: To change the contents of variable A to 1

1. Press ⇄, and then highlight [A=].

2. Press ①.
   • This displays the editing screen with 1 entered.

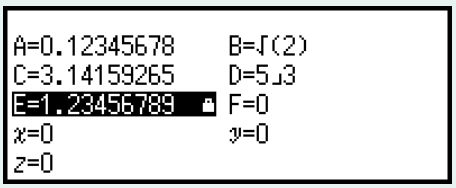

3. Press EXE.

Note

- In place of the operation in step 2 above, you can press OK and then select [Edit]. This displays the editing screen with nothing input. Input the value you want and then press EXE.
- If a lock ( ) icon appears when you highlight a variable on the variable list screen, it means the highlighted variable cannot be edited.

Example 3: To recall the contents of variable A
(Continuing from step 2 of Example 1)
1. Press SHIFT RCL, and then select [A=] > [Recall].
   • This inputs "A".

2. Press EXE.
   • This recalls the value of variable A.

Example 4: To multiply the contents of variable A by 10
(Continuing from step 2 of Example 1)

↑ 4 (A)* × 10 EXE

* Input a variable as shown here: press ↑ and then press the key that corresponds to the desired variable name. To input x as the variable name, you can press ↑ 0 (x) or x.

Clearing the Contents of All Memories

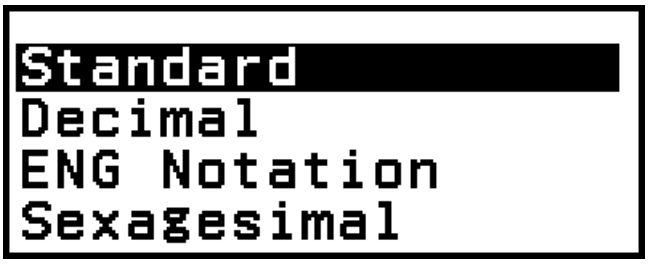

Ans memory and variable contents are retained even if you press Ⓐⓒ, change the calculator app, or turn off the calculator.
Perform the procedure below when you want to clear the contents of all memories.

1. Press ⌂, select a calculator app icon, and then press Ⓞⓚ.
2. Press ☰, and then select [Reset] > [Variable Memory] > [Yes].

Changing Calculation Result Format

Using the FORMAT Menu

You can use the FORMAT menu that appears when you press FORMAT to convert a displayed calculation result to various formats.

FORMAT Menu List

This menu item:	Converts to this format:
Standard	Standard (Includes fraction, π, $\sqrt{}$ formats.)
Decimal	Decimal
Prime Factor	Prime factorization
Improper Fraction	Improper fraction
Mixed Fraction	Mixed fraction
ENG Notation	Engineering notation ($a\times10^{n}$ format, n = exponent divisible by 3)
Sexagesimal	Degree, minute, second (Sexagesimal)

Note

- The menu items that appear when FORMAT is pressed depend on the currently displayed calculation result. Also, if a calculation result that cannot be converted is displayed, the menu will not appear when you press FORMAT.

Conversion Sample Operation

Example: $3 \div 2 = \frac{3}{2} = 1.5 = 1\frac{1}{2}$

In this example, we will convert a calculation result displayed as an improper fraction to a decimal value and then to a mixed fraction. Finally, we will cancel the conversion and go back to the original calculation result. (Input/Output: MathI/MathO, Fraction Result: Improp Fraction)

1. Execute the calculation 3 ÷ 2.

3 ÷ 2 EXE

2. To convert the calculation result to a decimal value, press FORMAT, select [Decimal], and then press EXE.

3. To convert the calculation result to a mixed fraction, press FORMAT, select [Mixed Fraction], and then press EXE.

4. To cancel conversion, press EXE.
   - This displays the original calculation result from step 1.

Standard and Decimal Conversion

Standard is a format that displays a calculation result in a form that includes a fraction, $\sqrt{}$, or π when possible. Decimal is a format that displays the calculation result as a decimal value.

Note

- Conversion to Standard format that includes $\sqrt{}$ or π is possible when MathI/MathO or MathI/DecimalO is selected for the Input/Output setting on the SETTINGS menu.

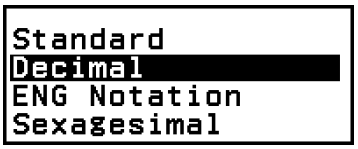

You can use the operation below to convert a calculation result to the Standard or Decimal format.

Example: $\pi \div 6 = \frac{1}{6}\pi = 0.5235987756$ (Input/Output: MathI/MathO)

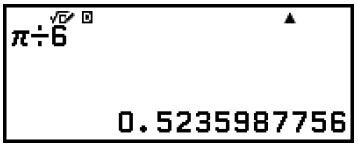

(Shift)(7)(π)(÷)6(EXE)

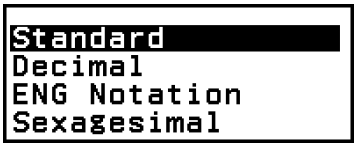

(FORMAT)(▼)
(Select [Decimal].)

(OK)
(Converts to a decimal value.)

(FORMAT)

(OK)
(Coverts to Standard format.)

Important!

- With certain calculation results, selecting [Standard] on the FORMAT menu will not convert the displayed value.

To obtain a decimal value calculation result while MathI/MathO or LineI/LineO is selected

Press (Shift)(EXE)(≈) instead of (EXE) after inputting a calculation.

Prime Factorization

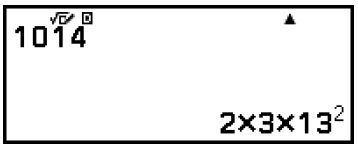

In the Calculate app, a positive integer no more than 10 digits long can be factored to prime factors.

Example: To perform prime factorization on 1014

1014 EXE

FORMAT – [Prime Factor]

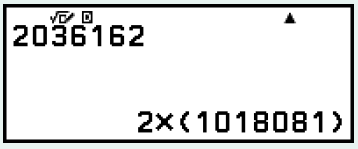

Note

- The types of values described below cannot be factored, even if they have 10 or fewer digits.
  - One of the prime factors of the value is 1,018,081 or greater.
  - Two or more of the prime factors of the value have more than three digits.
- The part that cannot be factored is enclosed in parentheses on the display.
  Example: 2036162 = 2 × (1018081)*

*1018081 = 1009^2

2036162 EXE
FORMAT – [Prime Factor]

Improper Fraction and Mixed Fraction Conversion

You can convert the currently displayed fraction or decimal value (decimal value that is convertible to a fraction by this calculator) calculation result to a mixed fraction or an improper fraction.

Example 1: $\frac{13}{4} = 3\frac{1}{4}$

(Input/Output: MathI/MathO, Fraction Result: Improp Fraction)

13 ⊟ 4 EXE

FORMAT – [Mixed Fraction]

FORMAT – [Improper Fraction]

Example 2: $3.25 = \frac{13}{4} = 3\frac{1}{4}$ (Input/Output: LineI/LineO)

3 . 25 EXE

FORMAT – [Improper Fraction]

(FORMAT) – [Mixed Fraction]

Engineering Notation

You can convert the exponent part of a displayed calculation result value to a power of ten that is a multiple of 3, and displays the result.

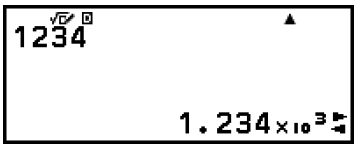

Example: Transform the value 1234 to engineering notation, shifting the decimal mark to the right, and then to the left.

1. Input 1234, and then press (EXE).

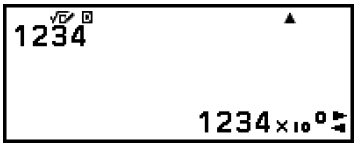

2. Perform the operation below to enter the ENG Conversion Mode.

(FORMAT) – [ENG Notation]

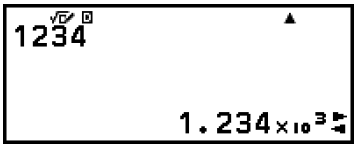

- Entering the ENG Conversion Mode converts the calculation result to engineering notation and causes ▶ to appear to its right.
- In the ENG Conversion Mode, you can use (<) and (>) to shift the decimal point of the mantissa.

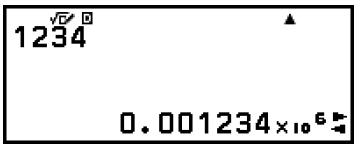

(>)

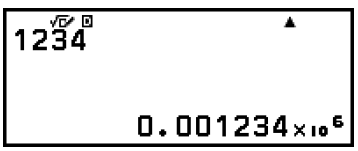

(<)

(<)

3. To exit the ENG Conversion Mode, press (↩).
   - This exits the ENG Conversion Mode and causes ▶ to disappear from the display.

- You can also exit the ENG Conversion Mode by pressing (OK) or (AC).

Note

- Normal calculations are not possible while in the ENG Conversion Mode. To start a new calculation, exit the ENG Conversion Mode.

Sexagesimal Conversion (Degree, Minute, Second Calculations)

You can convert a decimal value calculation result to a sexagesimal value.

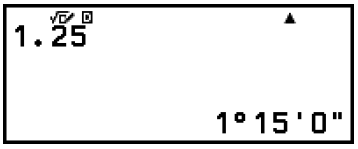

Converting a Decimal Value Calculation Result to a Sexagesimal Value

Example: 1.25 = 1°15’0”

1 . 25 EXE

FORMAT – [Sexagesimal]

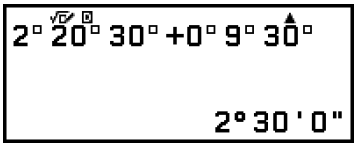

Inputting and Calculating with a Sexagesimal Value

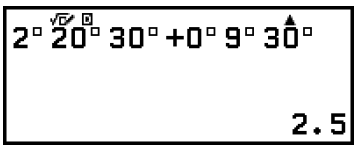

In addition to converting a displayed value to a sexagesimal value, you can also input sexagesimal values and use them in calculations.
The syntax below is for inputting a sexagesimal value:
{degrees} ⬆ ⊕ (°’”) {minutes} ⬆ ⊕ (°’”) {seconds} ⬆ ⊕ (°’”)
Note that you must always input something for the degrees and minutes, even if they are zero.

Example: To perform the calculation 2°20’30” + 9’30”. Next, convert the calculation result to a decimal value.

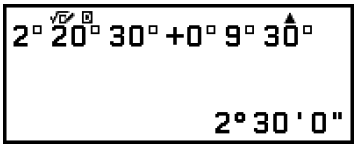

2 ⬆ ⊕ (°’”) 20 ⬆ ⊕ (°’”) 30 ⬆ ⊕ (°’”) ⊕
0 ⬆ ⊕ (°’”) 9 ⬆ ⊕ (°’”) 30 ⬆ ⊕ (°’”) EXE

(Convert to a decimal value.)
FORMAT – [Decimal]

(Return to sexagesimal display.)
(FORMAT) – [Sexagesimal]

Advanced Calculations

This section describes commands, functions, and symbols that are common to all of the calculator apps. The order used here to present commands, functions, and symbols is the same order in which they are displayed on the CATALOG menu that appears when you press ⓫.

Note

- There are also calculator app-specific CATALOG menu items, which are not shown here. See the chapter for each calculator app for more information about app-specific menu items.
- Depending on the calculator app you are using and the screen displayed by the calculator app, you may not be able to input some commands, functions, or symbols. Commands, functions, and symbols that cannot be input do not appear on the CATALOG menu.

Function Analysis

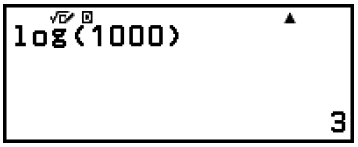

This section explains commands and functions that you can input after performing the operation: ⓫ – [Func Analysis].

Logarithm(logab), Logarithm(log)

Use ⓪②(log) or ⓫ – [Func Analysis] > [Logarithm(log)] to input $\log_a b$ as log (a, b). Base 10 is the initial default setting if you do not input anything for a.

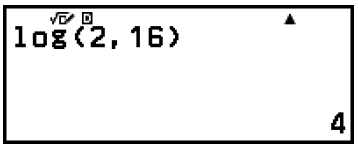

Example 1: $\log_{10}1000 = \log 1000 = 3$

⓪②(log)1000⑥ EXE

Example 2: $\log_2 16 = 4$

⓪②(log)2⓪⑥(,)16⑥ EXE

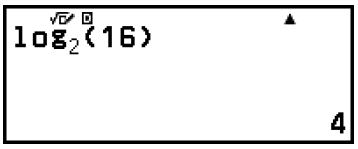

The ⑦ key (or ⓫ – [Func Analysis] > [Logarithm(logab)]) also can be used for input, but only while MathI/MathO or MathI/DecimalO is selected

for Input/Output on the SETTINGS menu. In this case, you must input a value for the base.

Example 3: $\log_2 16 = 4$

(log) 2 (>) 16 (EXE)

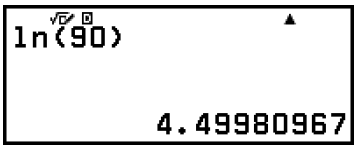

Natural Logarithm

Use (Shift) (log) (ln) or (Menu) – [Func Analysis] > [Natural Logarithm] to input "ln".

Example: ln 90 (= $\log_e 90$) = 4.49980967

(Shift) (log) (ln) 90) (EXE)

Probability

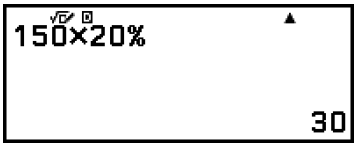

This section explains commands and functions that you can input after performing the operation: (Menu) – [Probability].

%

Inputting a value followed by % command causes the input value to become a percent.

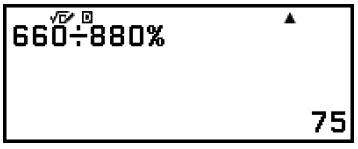

Example 1: 150 × 20% = 30

150 (×) 20
(Menu) – [Probability] > [%]
(EXE)

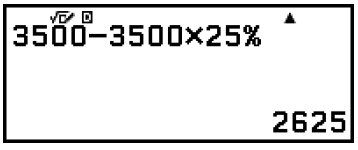

Example 2: Calculate what percentage of 880 is 660. (75%)

660 (÷) 880
(Menu) – [Probability] > [%]
(EXE)

Example 3: Discount 3500 by 25%. (2625)

3500 (−) 3500 (×) 25
(Menu) – [Probability] > [%]
(EXE)

Factorial(!)

This function obtains the factorials of a value that is zero or a positive integer.

Example: (5 + 3)! = 40320

(5+3)!

– [Probability] > [Factorial(!)]

EXE

Permutation(P), Combination(C)

Permutation ($_nP_r$) and combination ($_nC_r$) functions.

Example: To determine the number of permutations and combinations possible when selecting four people from a group of 10

Permutations:

10

– [Probability] > [Permutation(P)]

4 EXE

Combinations:

10

– [Probability] > [Combination(C)]

4 EXE

Random Number

This function generates a pseudo random number in the range of 0.000 to 0.999. The result is displayed as a fraction when MathI/MathO is selected for Input/Output on the SETTINGS menu.

Example: To obtain random three-digit integers

1000

– [Probability] > [Random Number]

EXE

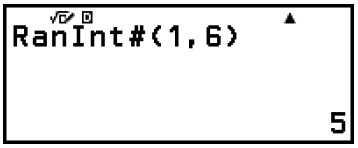

(The result differs with each execution.)

Random Integer

This function generates a pseudo random integer between a specified start value and end value.

Example: To generate random integers in the range of 1 to 6

(OPTN) – [Probability] > [Random Integer]
1(Ran#)(,)6)
(EXE)

(The result differs with each execution.)

Numeric Calculations

This section explains commands and functions that you can input after performing the operation: (OPTN) – [Numeric Calc].

Absolute Value

When you are performing a real number calculation, this function simply obtains the absolute value.

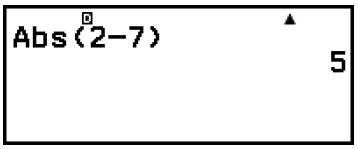

Example: |2 - 7| = Abs(2 - 7) = 5
(Input/Output: MathI/MathO)

(OPTN) – [Numeric Calc] > [Absolute Value]
2(−)7(EXE)

(Input/Output: LineI/LineO)

(OPTN) – [Numeric Calc] > [Absolute Value]
2(−)7)(EXE)

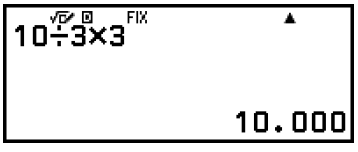

Round Off

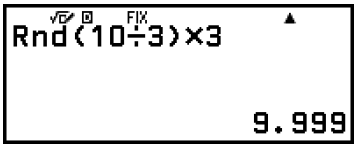

Using the Round Off function (Rnd) causes decimal fraction values of the argument to be rounded in accordance with the current Number Format setting. For example, the internal and displayed result of Rnd(10 ÷ 3) is 3.333 when the Number Format setting is Fix 3. Using the Norm 1 or Norm 2 setting cause the argument to be rounded off at the 11th digit of the mantissa part.

Example: To perform the following calculations when Fix 3 is selected for the number of display digits: 10 ÷ 3 × 3 and Rnd(10 ÷ 3) × 3
(Input/Output: MathI/DecimalO, Number Format: Fix 3)

10(÷)3(×)3(EXE)

㏍ – [Numeric Calc] > [Round Off]
10÷3)×3EXE

Angle Unit, Polar/Rectangular Coordinate, Sexagesimal

This section explains commands, functions, and symbols that you can input after performing the operation: ㏍ – [Angle/Coord/Sexa].

Degrees, Radians, Gradians

These functions specify the angle unit.
° specifies degree, ʳ radian, and ᵍ gradian.
You can input each function using the menu items below.

㏍ – [Angle/Coord/Sexa] > [Degrees]
㏍ – [Angle/Coord/Sexa] > [Radians]
㏍ – [Angle/Coord/Sexa] > [Gradians]

Example: π/2 radians = 90° (Angle Unit: Degree)

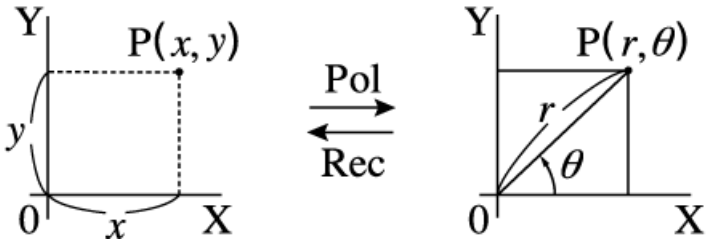

⏫⑦(π)㏒2>
㏍ – [Angle/Coord/Sexa] > [Radians]
EXE

Rect to Polar, Polar to Rect

"Pol(" converts rectangular coordinates to polar coordinates, while "Rec(" converts polar coordinates to rectangular coordinates.

$\mathrm{Pol}(x, y) = (r, \theta)$ $\mathrm{Rec}(r, \theta) = (x, y)$

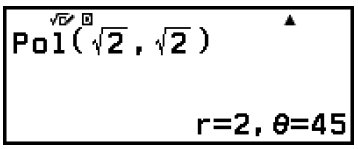

- Specify the Angle Unit on the SETTINGS menu before performing calculations.
- The calculation result for r and θ and for x and y are each stored respectively to variables x and y.
- Calculation result θ is displayed in the range of $-180° < \theta \leq 180°$.

Note

- Pol(and Rec(can be used on the calculation screen of the calculator apps below.
  Calculate, Statistics

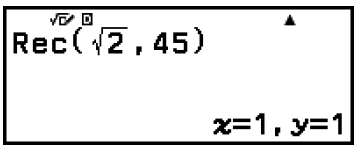

Example 1: To convert rectangular coordinates ($\sqrt{2}$, $\sqrt{2}$) to polar coordinates (Input/Output: MathI/MathO, Angle Unit: Degree)

– [Angle/Coord/Sexa] > [Rect to Polar]
√2)(,)√2)) EXE

Example 2: To convert polar coordinates ($\sqrt{2}$, 45°) to rectangular coordinates (Input/Output: MathI/MathO, Angle Unit: Degree)

– [Angle/Coord/Sexa] > [Polar to Rect]
√2)(,) 45) EXE

Degrees, Minutes, Seconds

You can use the keys or the menu item below to input the sexagesimal symbol (°).

(°’”)

– [Angle/Coord/Sexa] > [Degs Mins Secs]

For details, see **"Sexagesimal Conversion (Degree, Minute, Second Calculations)" (page 41)**.

Hyperbolic, Trigonometric

This section explains hyperbolic and trigonometric functions.

Hyperbolic Functions

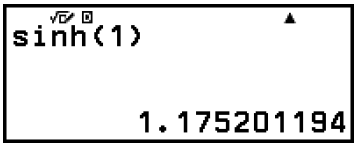

Hyperbolic functions can be input using the menu items below.

– [Hyperbolic/Trig] > [sinh], [cosh], [tanh], [$\sinh^{-1}$], [$\cosh^{-1}$], or [$\tanh^{-1}$]

The angle unit setting does not affect calculations.

Example: sinh 1 = 1.175201194

– [Hyperbolic/Trig] > [sinh] 1) EXE

Trigonometric Functions

Trigonometric functions can be input using the keys or menu items below.

Key	Menu Item
(sin)	(▤) – [Hyperbolic/Trig] > [sin]
(cos)	(▤) – [Hyperbolic/Trig] > [cos]
(tan)	(▤) – [Hyperbolic/Trig] > [tan]
(⇧)(sin)($\sin^{-1}$)	(▤) – [Hyperbolic/Trig] > [$\sin^{-1}$]
(⇧)(cos)($\cos^{-1}$)	(▤) – [Hyperbolic/Trig] > [$\cos^{-1}$]
(⇧)(tan)($\tan^{-1}$)	(▤) – [Hyperbolic/Trig] > [$\tan^{-1}$]

Specify the Angle Unit on the SETTINGS menu before performing calculations.

Example: sin 30 = $\frac{1}{2}$ (Angle Unit: Degree)

(sin)30(⟩)(EXE)

Others

Functions and symbols that can be input with the calculator keys can also be input using the [Other] menu. Use (▤) – [Other] to display the function and symbol menu. For example, to input Ans, you could either press (Ans) or perform the following operation: (▤) – [Other] > [Ans].
The table below shows the [Other] menu item that corresponds to each key operation.

Menu Item	Key
Ans	(Ans)
π	(⇧)(7)(π)
e	(⇧)(8)(e)
$\sqrt{}$(	($\sqrt{\blacksquare}$)

$\sqrt[x]{}$(	⇧ √ ($\sqrt[\blacksquare]{\square}$)
-1 *1	⇧ ▪ ($\blacksquare^{-1}$)
2 *2	▪ ($\blacksquare^{2}$)
^(	▪ ($\blacksquare^{\square}$)
- *3	⇧ − ((-))
,	⇧) (,)
(	(
)	)

*1 Reciprocal

*2 Square

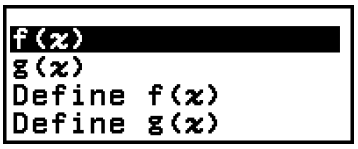

*3 Minus sign

Registering and Using Defining Equations for $f(x)$ and $g(x)$

Registering and Using Defining Equations for $f(x)$ and $g(x)$

Your calculator includes "f(" and "g(" functions that you can use after registering defining equations for them. For example, after registering $f(x) = x^2 + 1$ as a defining equation for the "f(" function, you can calculate f(0) = 1 and f(5) = 26.

Pressing [f(x)] displays a menu for registering the defining equation of $f(x)$ or $g(x)$, and for inputting "f(" or "g(".

Note

- The defining equations of $f(x)$ and $g(x)$ are also used by $f(x)$ and $g(x)$ in the Table app. For information about the Table app, see **"Creating a Number Table" (page 72)**.

Registering a Defining Equation

Example 1: To register $f(x) = x^2 + 1$

1. Press [⌂], select the Calculate app icon, and then press [OK].
2. Press [f(x)], and then select [Define f(x)].
   - This displays the $f(x)$ equation registration screen.

3. Input $x^2 + 1$.

[x] [x²] [+] 1 

4. Press [EXE].
   - This registers the expression you input, and the screen that was shown before you pressed [f(x)] in step 2 of this procedure re-appears.

Note

- A defining equation can be registered from any calculator app except Math Box. However, depending on the screen displayed by the calculator app (for example, if a menu screen is displayed), the menu may not appear when you press [f(x)].

Performing a Calculation by Assigning a Value to the Registered Defining Equation

Example 2: To assign the value x = 3 to $f(x)$, which you registered in Example 1

(Continuing from Example 1)

1. Press (f(x)), and then select [f(x)].
   - This inputs "f(".

2. Assign a value of 3 and then execute the calculation.

3) (EXE)

Registering a Composite Function

Example 3: To insert $f(x)$ defined in Example 1 into $g(x)$ in order to register $g(x) = f(x) \times 2 - x$

(Continuing from Example 1)

1. Press (f(x)), and then select [Define g(x)].
   - This displays the $g(x)$ equation registration screen.

2. Input $f(x) \times 2 - x$.

(f(x))* (EXE) (X)) (×) 2 (−) (X)

* Pressing (f(x)) while the $g(x)$ equation registration screen is displayed, the only menu item that appears is [f(x)]. In the same way, pressing (f(x)) while the $f(x)$ equation registration screen is displayed, the only menu item that appears is [g(x)].

3. Press (EXE).
   - This registers the equation you input and returns to the screen displayed before you started this operation with step 1.

Note

- The operation for assigning a value to x of $g(x)$ and calculating the result is the same as that under **"Performing a Calculation by Assigning a Value to the Registered Defining Equation" (page 52)**. However, note that instead of selecting [f(x)] in step 1, you should select [g(x)].
- In the operation of Example 3, you input $f(x)$ into the defining equation of $g(x)$. Conversely, you can also input $g(x)$ into the $f(x)$ defining equation. However, do not

have $g(x)$ input into $f(x)$, and $f(x)$ input into $g(x)$ at the same time. If you do, a Circular ERROR will occur when you perform a calculation using $f(x)$ or $g(x)$.

Data Retention

Performing any one of the operations below causes the defining equations registered to $f(x)$ and $g(x)$ to be deleted.

- Pressing ⏻
- Using the SETTINGS menu to switch the Input/Output setting between MathI*1 and LineI*2.
  *1 MathI/MathO or MathI/DecimalO
  *2 LineI/LineO or LineI/DecimalO
- Executing ☰ – [Reset] > [Settings & Data] or ☰ – [Reset] > [Initialize All]

Using QR Code Functions

Using QR Code Functions

Your calculator can display QR Code symbols that can be read by a smart device.

Important!

- The operations in this section assume that the smart device being used has a QR Code reader that can read multiple QR Code symbols, and it can connect to the Internet.
- Scanning a QR Code displayed by this calculator with a smart device will cause the smart device to access the CASIO website.

Note

- QR Code appears on the display whenever you press ⏫ ⓧ(QR) while any one of the screens below is displayed.
  - HOME screen
  - SETTINGS menu screen
  - Error screens
  - Calculation result screens in any calculator app
  - Table screens in any calculator app

  For details, visit the CASIO website (https://wes.casio.com).

Displaying a QR Code

Example: To display the QR Code for a calculation result in the calculator's Calculate app and scan it with a smart device

1. In the Calculate app, perform some calculation.
2. Press ⏫ ⓧ(QR) to display the QR Code.
   - The numbers in the lower right corner of the display show the current QR Code number and the total number of QR Code symbols. To display the next QR Code, press ⓥ or ⓄⓀ.

   Note

   - To return to a previous QR Code, press ⓥ or ⓄⓀ as many times as required to scroll forward until it appears.

3. Use a smart device to scan the QR Code on the calculator display.
   - For information about how to scan a QR Code, refer to the user documentation of the QR Code reader you are using.

If You Experience Difficulty Scanning a QR Code

While the QR Code is displayed, use ⊖ and ⊕ to adjust the display contrast of the QR Code. This contrast adjustment affects QR Code displays only.

Important!

- Depending on the smart device and/or QR Code reader app being used, you may experience problems scanning the QR Code symbols produced by this calculator.
- When the "QR Code" setting on the SETTINGS menu is "Version 3", the calculator apps that can display QR Code symbols are limited. If you try to display a QR Code in an app that does not support QR Code display, the message "Not Supported (Version 3)" will appear. However, the QR Code produced by this setting is easier to scan with a smart device.
- For more information, visit the CASIO website (**https://wes.casio.com**).

Using Calculator Apps

Statistical Calculations

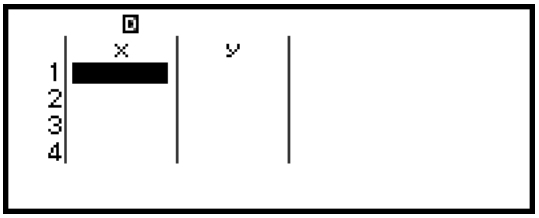

The Statistics app calculates various statistical values based on single-variable (x) or paired-variable (x, y) data.

General Procedure for Performing a Statistical Calculation

1. Press ⌂, select the Statistics app icon, and then press OK.
2. On the menu that appears, select [1-Variable] (single-variable) or [2-Variable] (paired-variable), and then press OK.
   - This displays the Statistics Editor.

Single-variable

Paired-variable

3. Display the Freq (frequency) column as needed.
   - For details, see **"Freq (Frequency) Column" (page 57)**.
4. Input data.
   - For details, see **"Inputting Data with Statistics Editor" (page 57)**.
5. After you finish inputting data, press OK.
   - This causes the menu below to appear.

Single-variable

Paired-variable

6. Select the menu item for the operation you want to perform.
   - Select [1-Var Results], [2-Var Results], or [Reg Results] to see a list of calculation results based on the data you entered. For details, see **"Displaying Statistical Calculation Results" (page 60)**.
   - To display a statistical calculation screen for performing calculations based on the input data, select [Statistics Calc]. For details, see **"Using Statistical Calculation Screen" (page 64)**.

Note

- To return to the Statistics Editor from a statistical calculation screen, press (AC) and then (↩).

Inputting Data with Statistics Editor

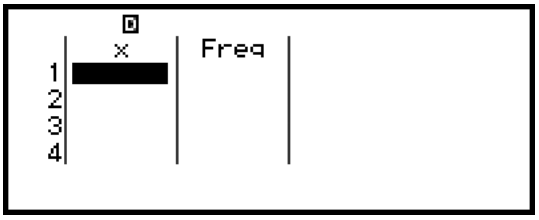

Statistics Editor displays one, two, or three columns: single-variable (x), single-variable and frequency (x, Freq), paired-variable (x, y), paired-variable and frequency (x, y, Freq). The number of data rows that can be input depends on the number of columns: 160 rows for one column, 80 rows for two columns, 53 rows for three columns.

Important!

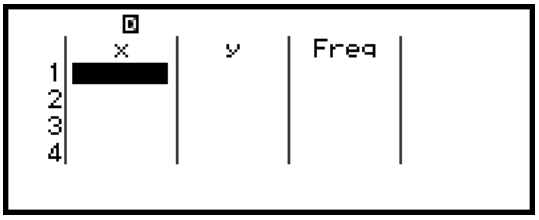

- All data currently input in the Statistics Editor is deleted whenever you perform any of the operations below.
  - Switching the statistical calculation type between single-variable and paired-variable
  - Changing the Frequency setting on the TOOLS menu
- Statistical calculations can take considerable time when there are a large number of data items.

Freq (Frequency) Column

If you turn on the Frequency setting on the TOOLS menu, a column labeled "Freq" will also be included on the Statistics Editor. You can use the Freq column to specify the frequency (the number of times the same sample appears in the data group) of each sample value.

Single-variable

Paired-variable

To display the Freq column

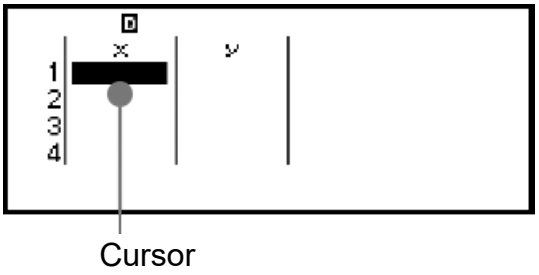

1. While the Statistics Editor is displayed, press ⋯ and then select [Frequency] > [On].
2. Press AC to return to the Statistics Editor.

To hide the Freq column

1. While the Statistics Editor is displayed, press ⋯ and then select [Frequency] > [Off].
2. Press AC to return to the Statistics Editor.

Rules for Inputting Sample Data on the Statistics Editor

Data you input is inserted into the cell where the cursor is located. Use the cursor keys to move the cursor between cells.

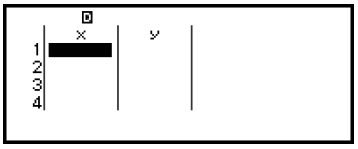

Cursor

After inputting a value, press EXE. This registers the value and displays up to six of its digits in the cell.

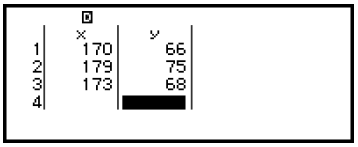

Example 1: To select paired-variable and input the following data: (170, 66), (179, 75), (173, 68)

1. Press ⌂, select the Statistics app icon, and then press OK.
2. Select [2-Variable], and then press OK.

3. Use the operation below to input data.

170 EXE 179 EXE 173 EXE ▼ ▶
66 EXE 75 EXE 68 EXE

Note

- On the Statistics Editor, you can store the value in a cell to a variable. For example, performing the following operation while the screen in step 3 is displayed above will store 68 to variable A: ▲ ALPHA – [A=] > [Store]. For details about variables, see **"Variables (A, B, C, D, E, F, x, y, z)" (page 33)**.

Editing Sample Data

To replace the data in a cell

On the Statistics Editor, move the cursor to the cell containing the data you want to edit, input the new data, and then press EXE.

To delete a row

On the Statistics Editor, move the cursor to the row you want to delete and then press DEL.

To insert a row

1. On the Statistics Editor, move the cursor to the row that will be under the row you will insert.
2. Perform the following operation: ⋯ – [Edit] > [Insert Row].

To delete all Statistics Editor contents

On the Statistics Editor, perform the following operation: ⋯ – [Edit] > [Delete All].

Sorting Data

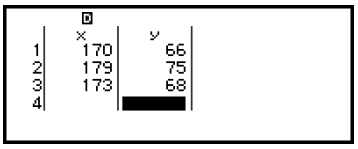

You can sort Statistics Editor data in ascending or descending order on its x, y, or Freq-column values.

Important!

- Note that after you change the data sort sequence, you will not be able to return it to its original sequence.

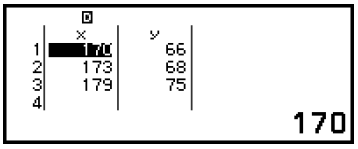

Example 2: To sort the data input in **Example 1 (page 58)** in ascending order on the x column, and then in descending order on the y column

1. Use the procedure in Example 1 to input the data.

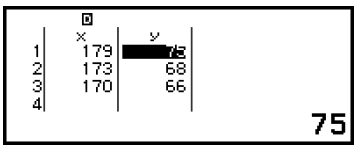

2. Sort the data in ascending order on the x column.

⋯ – [Sort] > [x Ascending]

3. Sort the data in descending order on the y column.

⋯ – [Sort] > [y Descending]

Displaying Statistical Calculation Results

Displaying Single-Variable Statistical Calculation Results

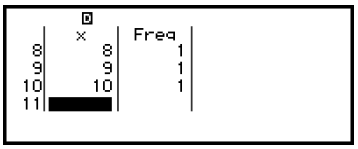

The 1-Var Results screen shows a list of various statistical values (such as mean and population standard deviation) calculated based on single-variable data. This section describes the operation required to display the 1-Var Results screen.

Example 3: To input the data below and display single-variable statistical calculation results

x	1	2	3	4	5	6	7	8	9	10
Freq	1	2	1	2	2	2	3	4	2	1

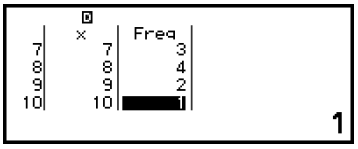

1. Press ⌂, select the Statistics app icon, and then press OK.
2. Select [1-Variable], and then press OK.
   - This displays the Statistics Editor.
3. Press ⋯ and then select [Frequency] > [On].
   - Press AC to return to the Statistics Editor.
4. Input data into the x-column.

1 EXE 2 EXE 3 EXE 4 EXE 5 EXE 6 EXE 7 EXE 8 EXE 9 EXE 10 EXE

5. Input data into the Freq column.

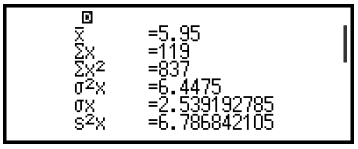

(▼)(▶)(▼)2(EXE)(▼)2(EXE)2(EXE)2(EXE)3(EXE)4(EXE)2(EXE)

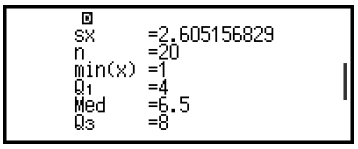

6. Press (OK).

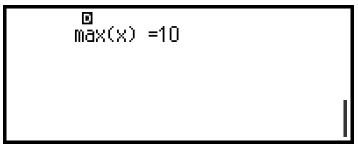

7. Select [1-Var Results], and then press (OK).
   - This displays the 1-Var Results screen.

(▼) (or (▼▼))

(▼) (or (▼▼))

   - For the meanings of the variables shown on the 1-Var Results screen, see the **"List of Statistical Value Variables and Statistical Calculation Functions" (page 67)**.
8. Press (↩) or (AC) to return to the Statistics Editor.

Displaying Paired-Variable Statistical Calculation Results

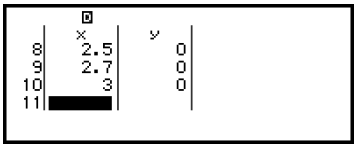

The 2-Var Results screen shows a list of various statistical values (such as mean and population standard deviation) calculated based on paired-variable data. This section describes the operation required to display the 2-Var Results screen.

Example 4: To input the data below and display paired-variable statistical calculation results

x	1.0	1.2	1.5	1.6	1.9	2.1	2.4	2.5	2.7	3.0
y	1.0	1.1	1.2	1.3	1.4	1.5	1.6	1.7	1.8	2.0

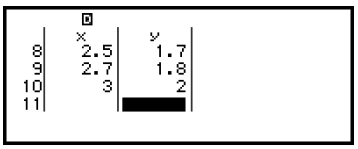

1. Press (⌂), select the Statistics app icon, and then press (OK).
2. Select [2-Variable], and then press (OK).
   - This displays the Statistics Editor.
3. Input data into the x-column.

1 EXE 1 . 2 EXE 1 . 5 EXE 1 . 6 EXE 1 . 9 EXE
2 . 1 EXE 2 . 4 EXE 2 . 5 EXE 2 . 7 EXE 3 EXE

1 . 5 EXE 1 . 6 EXE 1 . 7 EXE 1 . 8 EXE 2 EXE

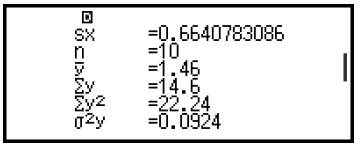

5. Press [OK].

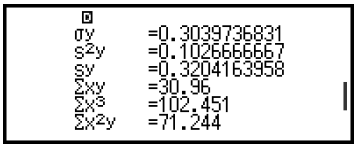

6. Select [2-Var Results], and then press [OK].
   - This displays the 2-Var Results screen.

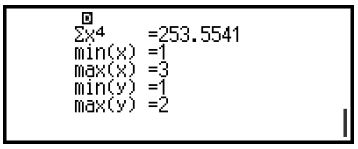

▼ (or ⏬)

▼ (or ⏬)

▼ (or ⏬)

   - For the meanings of the variables shown on the 2-Var Results screen, see the **"List of Statistical Value Variables and Statistical Calculation Functions" (page 67)**.

7. Press ⮌ or [AC] to return to the Statistics Editor.

Displaying Regression Calculation Results

The Reg Results screen displays a list of regression calculation results (coefficients of regression equations) based on paired-variable data. This section describes the operation required to display the Reg Results screen.

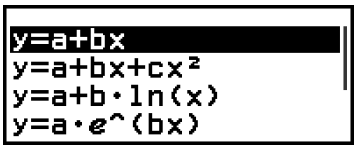

Example 5: To use the paired-variable data input in **Example 4 (page 61)** and display the results of the two regression calculations shown below

- The regression equation "$y = a + bx$" coefficients (a, b), and the correlation coefficient (r) when linear regression is performed on the data
- The regression equation "$y = a + bx + cx^2$" coefficients (a, b, c) when quadratic regression is performed on the data

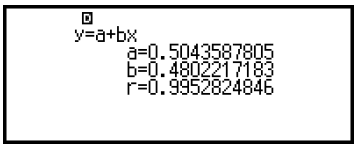

Note

- For information about regression calculation types supported by the Statistics app, see the **"Supported Regression Type List" (page 64)**.

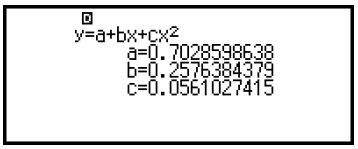

1. Perform steps 1 through 5 of the procedure under **Example 4 (page 61)**.
2. Select [Reg Results], and then press [OK].
   - This displays the regression type menu.

3. Select [y=a+bx], and then press [OK].
   - This displays the linear regression Reg Results screen.

4. Press [⮌] or [AC] to return to the Statistics Editor.
5. Press [OK], and then select [Reg Results] > [y=a+bx+cx^2].
   - This displays quadratic regression Reg Results screen.

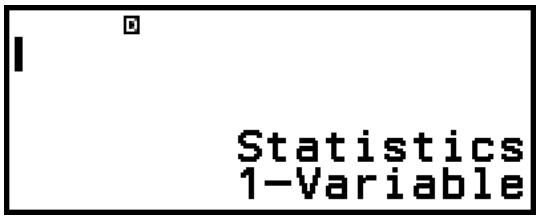

6. Press [⮌] or [AC] to return to the Statistics Editor.
   - For the meanings of the variables shown on the Reg Results screen, see the **"List of Statistical Value Variables and Statistical Calculation Functions" (page 67)**.

Supported Regression Type List

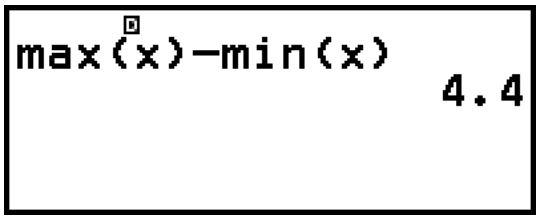

Regression Type	Regression Equation (regression type menu item)
Linear Regression	$y = a + bx$
Quadratic Regression	$y = a + bx + cx^2$
Logarithmic Regression	$y = a + b \cdot \ln(x)$
e exponential Regression	$y = a \cdot e^{(bx)}$
ab exponential Regression	$y = a \cdot b^x$
Power Regression	$y = a \cdot x^b$
Inverse Regression	$y = a + b/x$

Using Statistical Calculation Screen

You can use the statistical calculation screen to recall individual statistical values and use the values in calculations.

Screen without calculation expression input

Example calculation

To recall a statistical value, use a variable representing the statistical value you want to recall (for example, x mean: $\bar{x}$, x population standard deviation: σ_x, x maximum value: max(x), and so on). For more information about these variables, see the **"List of Statistical Value Variables and Statistical Calculation Functions" (page 67)**.

Displaying a Statistical Calculation Screen

Single-variable

1. While the Statistics Editor is displayed, press [OK].
2. On the menu that appears, select [Statistics Calc] and then press [OK].

Paired-variable

1. While the Statistics Editor is displayed, press [OK].
2. On the menu that appears, select [Statistics Calc] and then press [OK].
   - This displays the regression type menu (see the **"Supported Regression Type List" (page 64)**).

3. On the menu, select the regression type you want and then press [OK].

   - In the example above, use the displayed menu to select [y=a+bx] (Linear regression).

To return to the Statistics Editor from a statistical calculation screen

Press [AC], and then [⮌].

Calculation Example Using the Statistical Calculation Screen

Example 6: To determine the sum of the sample data (Σx) and mean ($\bar{x}$) of the single-variable data input in **Example 3 (page 60)**

1. Perform steps 1 through 6 of the procedure under **Example 3 (page 60)**.
2. Select [Statistics Calc], and then press [OK].

3. Calculate the sum of the sample data (Σx).

(☰) – [Statistics] > [Summation] > [Σx]
(EXE)

4. Calculate the mean ($\bar{x}$).

(☰) – [Statistics] > [Mean/Var/Dev···] > [$\bar{x}$]
(EXE)

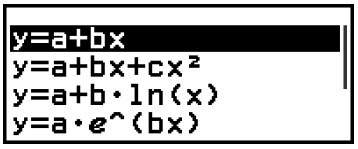

Note

- To display the 1-Var Results screen from the statistical calculation screen above, press (○○○) and then select [1-Var Results]. To return to the statistical calculation screen from the 1-Var Results screen, press (↩) or (AC).

Example 7: To determine the coefficients (a, b) and correlation coefficient (r) of the linear regression equation "$y = a + bx$" based on the paired-variable data input in **Example 4 (page 61)**

1. Perform steps 1 through 5 of the procedure under **Example 4 (page 61)**.
2. Select [Statistics Calc], and then press (OK).
   - This displays the regression type menu.

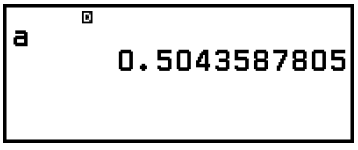

3. Select [y=a+bx], and then press (OK).

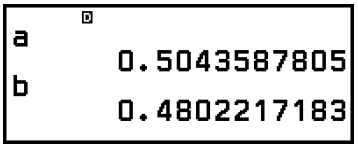

4. Determine the coefficients (a, b) and correlation coefficient (r) of the regression equation "$y = a + bx$".

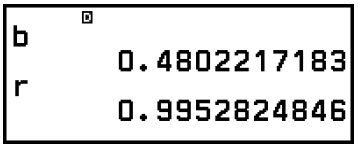

(☰) – [Statistics] > [Regression] > [a]
(EXE)

(☰) – [Statistics] > [Regression] > [b]
(EXE)

(menu) – [Statistics] > [Regression] > [r] (EXE)

- To select a different regression type, press (opt) and then select [Select Reg Type]. This displays the regression type menu from step 2.

To display the 2-Var Results screen from a statistical calculation screen

Press (opt) and then select [2-Var Results].

To display the Reg Results screen from a statistical calculation screen

Press (opt) and then select [Reg Results].

List of Statistical Value Variables and Statistical Calculation Functions

You can use the CATALOG menu to recall variables representing statistical values and functions used for statistical calculations.

Note

- For single-variable statistical calculations, the variables marked with an asterisk (*) are available.
- For the calculation formula used for each variable and command, see **"Statistical Calculation Formula" (page 69)**.

(menu) – [Statistics] > [Summation]

Σx^*, Σy ..... sum of the sample data
Σx^{2*}, Σy^2 ..... sum of squares of the sample data
Σxy ..... sum of products of the x-data and y-data
Σx^3 ..... sum of cubes of the x-data
$\Sigma x^2 y$ ..... sum of (x-data squares × y-data)
Σx^4 ..... sum of biquadrate of the x-data

(menu) – [Statistics] > [Mean/Var/Dev…]

$\bar{x}^*$, $\bar{y}$ ..... mean
$\sigma^2{}_x{}^*$, $\sigma^2{}_y$ ..... population variance
$\sigma_x{}^*$, σ_y ..... population standard deviation
$s^2{}_x{}^*$, $s^2{}_y$ ..... sample variance
$s_x{}^*$, s_y ..... sample standard deviation
n^* ..... number of items

(menu) – [Statistics] > [Min/Max/Quartile] (Single-Variable Data Only)

min(x)* ..... minimum value
Q_1* ..... first quartile
Med* ..... median
Q_3* ..... third quartile
max(x)* ..... maximum value

㊟ **– [Statistics] > [Min/Max]** (Paired-Variable Data Only)
min(x), min(y) ..... minimum value
max(x), max(y) ..... maximum value

㊟ **– [Statistics] > [Regression]** (Paired-Variable Data Only)

For quadratic regression
a, b, c ..... regression coefficients for quadratic regression
$\hat{x}_1$, $\hat{x}_2$ ..... Functions for determining x_1 and x_2 estimated values for an input y-value. For the argument, input the value of y immediately before the $\hat{x}_1$ or $\hat{x}_2$ function.
$\hat{y}$ ..... Function for determining the y estimated value for an input x-value. For the argument, input the value of x immediately before this function.

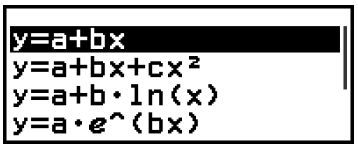

For non-quadratic regression
a, b ..... regression coefficients
r ..... correlation coefficient
$\hat{x}$ ..... Function for determining x estimated value for an input y-value. For the argument, input the value of y immediately before this function.
$\hat{y}$ ..... Function for determining the y estimated value for an input x-value. For the argument, input the value of x immediately before this function.
For an example of the operation to determine estimated values, see **"Calculating Estimated Values (Paired-Variable Data Only)" (page 68)**.

Calculating Estimated Values (Paired-Variable Data Only)

Based on the regression equation obtained by paired-variable statistical calculation, the estimated value of y can be calculated for a given x-value. The corresponding x-value (two values, x_1 and x_2, in the case of quadratic regression) also can be calculated for a value of y in the regression equation.

Example 8: To determine the estimated value for y when x = 5.5 in the regression equation produced by linear regression of the data input in **Example 4 (page 61)**

1. Perform steps 1 through 5 of the procedure under **Example 4 (page 61)**.
2. Select [Statistics Calc], and then press [OK].
   - This displays the regression type menu.

3. Select [y=a+bx], and then press [OK].

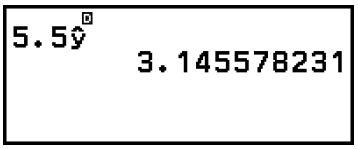

4. Input the x-value (5.5), and then input "$\hat{y}$", which is the function to determine the estimated value of y.

5 [.] 5
[Menu] – [Statistics] > [Regression] > [$\hat{y}$]

5. Press [EXE].

Statistical Calculation Formula

Single-Variable Statistical Calculation Formula

$$\bar{x} = \frac{\Sigma x}{n}$$

$$\sigma_x = \sqrt{\frac{\Sigma (x - \bar{x})^2}{n}}$$

$$s_x = \sqrt{\frac{\Sigma (x - \bar{x})^2}{n - 1}}$$

Paired-Variable Statistical Calculation Formula

$$\bar{x} = \frac{\Sigma x}{n}$$

$$\sigma_x = \sqrt{\frac{\Sigma (x - \bar{x})^2}{n}}$$

$$s_x = \sqrt{\frac{\Sigma (x - \bar{x})^2}{n - 1}}$$

$$\bar{y} = \frac{\Sigma y}{n}$$

$$\sigma_y = \sqrt{\frac{\Sigma (y - \bar{y})^2}{n}}$$

$$s_y = \sqrt{\frac{\Sigma (y - \bar{y})^2}{n - 1}}$$

Regression Calculation Formula

Linear Regression ($y = a + bx$)

$$a = \frac{\Sigma y - b \cdot \Sigma x}{n}$$

$$b = \frac{n \cdot \Sigma xy - \Sigma x \cdot \Sigma y}{n \cdot \Sigma x^2 - (\Sigma x)^2}$$

$$r = \frac{n \cdot \Sigma xy - \Sigma x \cdot \Sigma y}{\sqrt{\{n \cdot \Sigma x^2 - (\Sigma x)^2\}\{n \cdot \Sigma y^2 - (\Sigma y)^2\}}}$$

$$\hat{x} = \frac{y - a}{b}$$

$$\hat{y} = a + bx$$

Quadratic Regression ($y = a + bx + cx^2$)

$$a = \frac{\Sigma y}{n} - b\left(\frac{\Sigma x}{n}\right) - c\left(\frac{\Sigma x^2}{n}\right)$$

$$b = \frac{Sxy \cdot Sx^2x^2 - Sx^2y \cdot Sxx^2}{Sxx \cdot Sx^2x^2 - (Sxx^2)^2}$$

$$c = \frac{Sx^2y \cdot Sxx - Sxy \cdot Sxx^2}{Sxx \cdot Sx^2x^2 - (Sxx^2)^2}$$

$$Sxx = \Sigma x^2 - \frac{(\Sigma x)^2}{n}$$

$$Sxy = \Sigma xy - \frac{(\Sigma x \cdot \Sigma y)}{n}$$

$$Sxx^2 = \Sigma x^3 - \frac{(\Sigma x \cdot \Sigma x^2)}{n}$$

$$Sx^2x^2 = \Sigma x^4 - \frac{(\Sigma x^2)^2}{n}$$

$$Sx^2y = \Sigma x^2y - \frac{(\Sigma x^2 \cdot \Sigma y)}{n}$$

$$\hat{x}_1 = \frac{-b + \sqrt{b^2 - 4c(a - y)}}{2c}$$

$$\hat{x}_2 = \frac{-b - \sqrt{b^2 - 4c(a - y)}}{2c}$$

$$\hat{y} = a + bx + cx^2$$

Logarithmic Regression ($y = a + b \cdot \ln(x)$)

$$a = \frac{\Sigma y - b \cdot \Sigma \ln x}{n}$$

$$b = \frac{n\cdot\Sigma(\ln x)y - \Sigma\ln x\cdot\Sigma y}{n\cdot\Sigma(\ln x)^2 - (\Sigma\ln x)^2}$$

$$r = \frac{n\cdot\Sigma(\ln x)y - \Sigma\ln x\cdot\Sigma y}{\sqrt{\{n\cdot\Sigma(\ln x)^2 - (\Sigma\ln x)^2\}\{n\cdot\Sigma y^2 - (\Sigma y)^2\}}}$$

$$\hat{x} = e^{\frac{y-a}{b}}$$

$$\hat{y} = a + b\ln x$$

e Exponential Regression ($y = a\cdot e\text{^}(bx)$)

$$a = \exp\left(\frac{\Sigma\ln y - b\cdot\Sigma x}{n}\right)$$

$$b = \frac{n\cdot\Sigma x\ln y - \Sigma x\cdot\Sigma\ln y}{n\cdot\Sigma x^2 - (\Sigma x)^2}$$

$$r = \frac{n\cdot\Sigma x\ln y - \Sigma x\cdot\Sigma\ln y}{\sqrt{\{n\cdot\Sigma x^2 - (\Sigma x)^2\}\{n\cdot\Sigma(\ln y)^2 - (\Sigma\ln y)^2\}}}$$

$$\hat{x} = \frac{\ln y - \ln a}{b}$$

$$\hat{y} = ae^{bx}$$

ab Exponential Regression ($y = a\cdot b\text{^}x$)

$$a = \exp\left(\frac{\Sigma\ln y - \ln b\cdot\Sigma x}{n}\right)$$

$$b = \exp\left(\frac{n\cdot\Sigma x\ln y - \Sigma x\cdot\Sigma\ln y}{n\cdot\Sigma x^2 - (\Sigma x)^2}\right)$$

$$r = \frac{n\cdot\Sigma x\ln y - \Sigma x\cdot\Sigma\ln y}{\sqrt{\{n\cdot\Sigma x^2 - (\Sigma x)^2\}\{n\cdot\Sigma(\ln y)^2 - (\Sigma\ln y)^2\}}}$$

$$\hat{x} = \frac{\ln y - \ln a}{\ln b}$$

$$\hat{y} = ab^x$$

Power Regression ($y = a\cdot x\text{^}b$)

$$a = \exp\left(\frac{\Sigma\ln y - b\cdot\Sigma\ln x}{n}\right)$$

$$b = \frac{n\cdot\Sigma\ln x\ln y - \Sigma\ln x\cdot\Sigma\ln y}{n\cdot\Sigma(\ln x)^2 - (\Sigma\ln x)^2}$$

$$r = \frac{n\cdot\Sigma\ln x\ln y - \Sigma\ln x\cdot\Sigma\ln y}{\sqrt{\{n\cdot\Sigma(\ln x)^2 - (\Sigma\ln x)^2\}\{n\cdot\Sigma(\ln y)^2 - (\Sigma\ln y)^2\}}}$$

$$\hat{x} = e^{\frac{\ln y - \ln a}{b}}$$

$$\hat{y} = ax^b$$

Inverse Regression ($y = a + b/x$)

$$a = \frac{\Sigma y - b\cdot\Sigma x^{-1}}{n}$$

$$b = \frac{Sxy}{Sxx}$$

$$r = \frac{Sxy}{\sqrt{Sxx \cdot Syy}}$$

$$Sxx = \Sigma(x^{-1})^2 - \frac{(\Sigma x^{-1})^2}{n}$$

$$Syy = \Sigma y^2 - \frac{(\Sigma y)^2}{n}$$

$$Sxy = \Sigma(x^{-1})y - \frac{\Sigma x^{-1} \cdot \Sigma y}{n}$$

$$\hat{x} = \frac{b}{y - a}$$

$$\hat{y} = a + \frac{b}{x}$$

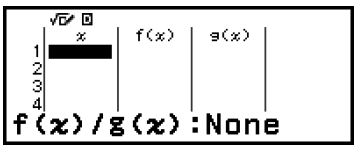

Creating a Number Table

You can use the Table app to create a number table based on the defining equations registered for functions $f(x)$ and $g(x)$.

General Procedure for Creating a Number Table

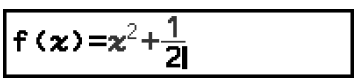

Example : To generate a number table for the functions $f(x) = x^2 + \frac{1}{2}$ and $g(x) = x^2 - \frac{1}{2}$ for the range $-1 \leq x \leq 1$, incremented in steps of 0.5

1. Press ⌂, select the Table app icon, and then press OK.
   - This displays the number table screen.
   - If a defining equation is not registered for either or both of $f(x)$ and $g(x)$ and the data at the cursor selection position is empty, a message will appear at the bottom of the screen indicating that the defining equation is not registered.

2. Configure settings to generate a number table from two functions.
   (1) Press ⋯, and then select [Table Type] > [f(x)/g(x)].
   (2) Press AC.
   - For information about settings, see **"Maximum Number of Rows in a Number Table According to Table Type" (page 73)**.
3. Register a defining equation for $f(x)$.

   ⋯ – [Define f(x)/g(x)] > [Define f(x)]
   x x^2 + 1 ▤ 2 EXE

(Screen immediately before you pressed [EXE])

4. Register a defining equation for $g(x)$.

[OPTN] – [Define f(x)/g(x)] > [Define g(x)]
[X] [x²] [−] 1 [,] 2 [EXE]

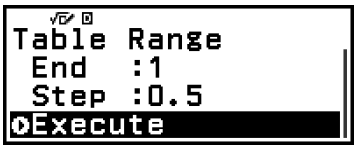

(Screen immediately before you pressed [EXE])

- You can also use [f(∞)] to register a defining expression. For more information, see **"Defining Equation Registration" (page 74)**.

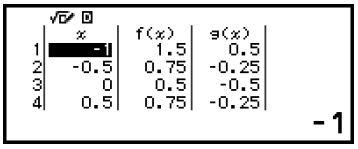

5. Configure the number table range setting.

[OPTN] – [Table Range]
[↑] [−] ((-)) 1 [EXE] 1 [EXE] 0 [.] 5 [EXE]

6. Press [EXE].

- This displays the result in the number table screen.

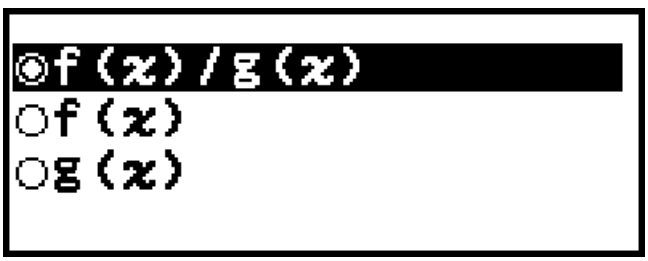

- The number table generation operation causes the contents of variable x to be changed.

Note

- On the number table screen, you can store the value in a cell to a variable. For example, performing the following operation while the screen in step 6 is displayed above will store -1 to variable A: [SHIFT] [RCL] – [A=] > [Store]. For details about variables, see **"Variables (A, B, C, D, E, F, x, y, z)" (page 33)**.

Maximum Number of Rows in a Number Table According to Table Type

You can configure number table screen settings to show columns for both $f(x)$ and $g(x)$, or for either one of them. To set it, use the menu that appears when you press [OPTN] – [Table Type] while the number table screen is displayed.

f(x)/g(x) ... Show both $f(x)$- and $g(x)$-columns (initial default setting)
f(x) ... Show only $f(x)$-column
g(x) ... Show only $g(x)$-column

The maximum number of rows in the generated number table depends on the Table Type setting. Up to 45 rows are supported for the "f(x)" or "g(x)" setting, while 30 rows are supported for the "f(x)/g(x)" setting.

Defining Equation Registration

There are two ways to register defining equations for $f(x)$ and $g(x)$.

- While the Table app number table screen is displayed, registering an equation by pressing ⋯
  ⋯ – [Define f(x)/g(x)] > [Define f(x)]
  ⋯ – [Define f(x)/g(x)] > [Define g(x)]
- While the Table app number table screen is displayed, or while using any calculator app except Math Box, registering an equation by pressing f(x)
  f(x) – [Define f(x)]
  f(x) – [Define g(x)]

The same $f(x)$ or $g(x)$ equation registration screen appears regardless of which of the two above operations is used to register defining equations.

Note

- For details about operations using f(x), see **"Registering and Using Defining Equations for $f(x)$ and $g(x)$" (page 51)**.

Editing Number Table Screen Data

To delete a row

1. On the number table screen, move the cursor to the row you want to delete.
2. Press DEL.

To insert a row

1. On the number table screen, move the cursor to the row that will be under the row you will insert.
2. Perform the following operation: ⋯ – [Edit] > [Insert Row].

To delete all number table screen contents

On the number table screen, perform the following operation: ⋯ – [Edit] > [Delete All].

To change the value input in a cell in column x

You can change the value in the currently highlighted x cell. Changing the x value causes the $f(x)$ and $g(x)$ values in the same row to be updated accordingly.

To enter a value into the highlighted x-column cell using: {value of the cell above} +/- {step value}

If there is value in the x cell above the currently highlighted x cell, pressing ⊕ or EXE automatically inputs into the highlighted cell the value equal to the value of the cell above it plus the step value. So also, pressing ⊖ automatically inputs the value equal to the value of the cell above less the step value. The $f(x)$ and $g(x)$ values in the same row are also updated accordingly.

$f(x)$ and $g(x)$ Update Timing

$f(x)$ and $g(x)$ values displayed on the number table screen are updated when any of the following occurs.

- When EXE is pressed while [Execute] is selected on the Table Range screen.
- When the defining equations for $f(x)$ and $g(x)$ are updated (except when a defining equation is a composite function).
- When a number is input into column x (including pressing ⊕, ⊖, EXE in column x).

Note, however, that values are not updated automatically after the following operations.

- When the SETTINGS menu is used to change the Angle Unit setting.
- When the variable of a defining equation is updated (new numeric value stored) when a defining equation that contains a variable (example: $f(x) = 2x + A$) is registered.
- When the defining equation of a composite function (Example: $g(x) = f(x) \times 2 - x$) is registered, and the defining equation of the reference function (Example: $f(x)$ of $g(x) = f(x) \times 2 - x$) is updated (new defining equation registered).

In these cases, execute ⋯ – [Recalculate] while the number table screen is displayed to update values.

Data Retention

Doing the following will discard some data and clear some settings of the Table app.

① Returning to the HOME screen and launching another calculator app.

② Pressing ⏻.
③ Changing the Input/Output setting with the SETTINGS menu.
④ Changing the Table Type setting with the TOOLS menu.

The table below shows which data is discarded and which data is retained.

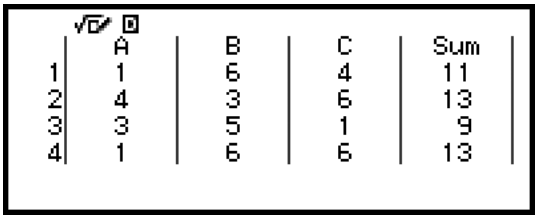

Operation / Data, Setting	①	②	③	④
Number table data (x-, $f(x)$-, $g(x)$-columns)	Discarded	Discarded	Discarded	Discarded
Table Range settings	Discarded	Retained	Retained	Retained
Table Type settings	Retained	Retained	Retained	--
$f(x)$, $g(x)$ defining equations	Retained	Discarded	Discarded	Retained

Using Math Box

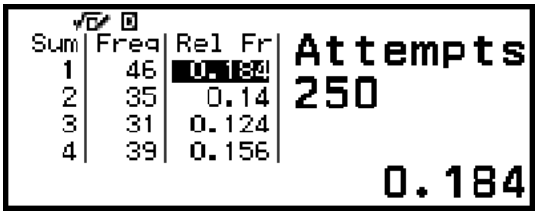

The Math Box app has the following learning support functions.
Dice Roll: Dice Roll is function that simulates dice probability.
Coin Toss: Coin Toss is a function that simulates coin toss probability.

Dice Roll

Dice Roll performs a simulation of one, two, or three virtual dice rolls a specified number of times. You can select either of the following screens for the result.

List screen

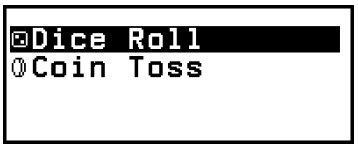

Relative Freq screen

Dice Roll General Operation Procedure

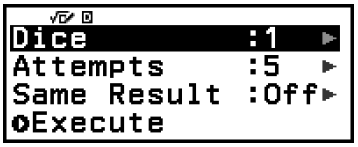

Example: To simulate 100 rolls of two dice. For this example, the Relative Freq screen is used for simulation results, showing the number

of occurrences (frequencies) and relative frequencies of the numeric difference (0, 1, 2, 3, 4, 5) between the two dice each roll.

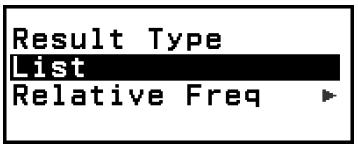

1. Press ⌂, select the Math Box app icon, and then press OK.
   • This displays the Math Box menu.

2. Select [Dice Roll], and then press OK.
   • This displays the parameter input screen.

   Dice: Select the number of dice as 1, 2, or 3.
   Attempts: Input the number of dice rolls (number of trials) as a value from 1 to 250.
   Same Result: This setting is normally Off (initial default setting). For details, see **"Same Result Setting" (page 79)**.
3. Select each of the menu settings and configure them the way you want.
   (1) Select [Dice] and then press OK. On the menu that appears, select [2 Dice] and then press OK.
   (2) Select [Attempts] and then press OK. On the input screen that appears, input 100 and then press OK. Select [Confirm] and then press OK.
   (3) Leave the [Same Result] set to Off (initial default setting).
4. After all of the settings are the way you want, select [Execute] and then press OK.
   • The screen showing execution of the simulation will appear, and then the screen will change to the Result Type menu.

   List: Shows a list of the outcome of each roll (trial).*1
   Relative Freq: Shows the number of occurrences based on roll results*2 and their relative frequencies.
   *1 When there are two dice, the outcome of each roll is displayed along with each roll's sum and difference. When there are three dice, the outcome of each roll is displayed along with the sum of the roll.

*2 Outcome (1 through 6) in the case of one die, sum (2 through 12) or difference (0 through 5) of the outcomes in the case of two dice, and sum (3 through 18) of the outcomes in the case of three dice.

5. Use the Result Type menu to select a result display format.
   (1) Here, we want to display the number of occurrences and relative frequencies, so select [Relative Freq] and then press [OK].
      • This displays the [Sum] or [Difference] selection menu.
   (2) Here, we want to display the difference in the outcome of each roll, so select [Difference] and then press [OK].
      • The simulation result is displayed on the Relative Freq screen.

(The result differs with each execution.)

      • For details about the simulation result screen, see **"Dice Roll Result Screen" (page 78)**.
6. To display results using a different format, display the result screen and then press [EXIT].
   • This returns to the Result Type menu, so you can repeat step 5 of this procedure and change the result display format.
7. If you want to perform a simulation with different settings, press [EXIT] while the Result Type menu is displayed.
   • This clears the simulation result and returns to the parameter input screen. Perform the procedure again from step 3.
8. To exit Dice Roll, press [EXIT] while the parameter input screen is displayed.
   • This returns to the Math Box menu.

Note

• On the Relative Freq screen, you can store the value in a Rel Fr column cell to a variable. For example, performing the following operation in step 5, above, will store the value in the first row of the "Rel Fr" column to variable A: [SHIFT] [RCL] – [A=] > [Store]. For details about variables, see **"Variables (A, B, C, D, E, F, x, y, z)" (page 33)**.

Dice Roll Result Screen

• List screen

(1) Each row shows a sequential roll number. For example, 1 is the first roll, 2 is the second roll, and so on.

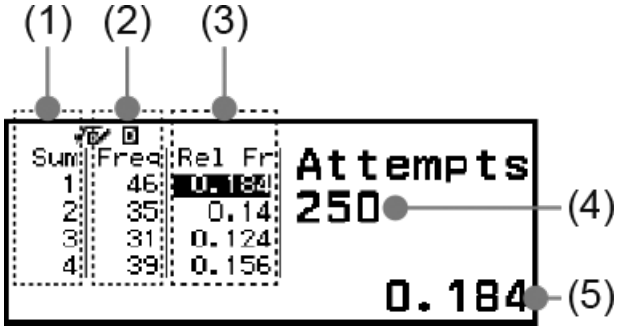

(2) A, B, and C indicate each of the die being used. "Sum" is for the outcome total, and "Diff" is for the difference between the outcomes of two dice. The columns that appear on the display depend on how many dice are being used.

1 die: A-column only.

2 dice: A, B, Sum, and Diff columns.

3 dice: A, B, C, and Sum columns.

• Relative Freq screen

(1) Sum or Diff: Shows the one die outcome (Sum: 1 through 6), two dice outcome sum (Sum: 2 through 12) or difference (Diff: 0 through 5), or three dice outcome sum (Sum: 3 through 18).

(2) Freq: Shows the number of occurrences (frequency) of each roll outcome.

(3) Rel Fr: Shows the relative frequency (frequency divided by number of rolls) of roll results.

(4) Number of trials

(5) Highlighted Rel Fr cell’s value

Same Result Setting

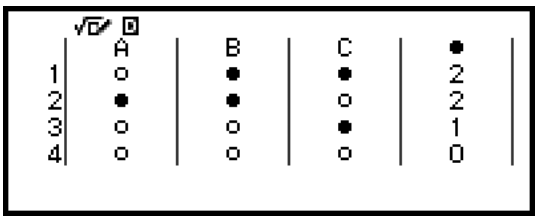

When executing a Dice Roll or Coin Toss simulation with Same Result at its initial default setting (Off), each execution displays a different (random) result. If the Same Result setting is changed to something other than Off, the displayed results are those determined by the calculator. Using the #1, #2, or #3 setting is useful when you want the same result to be displayed by all the calculators being used by the students in a class.

Note

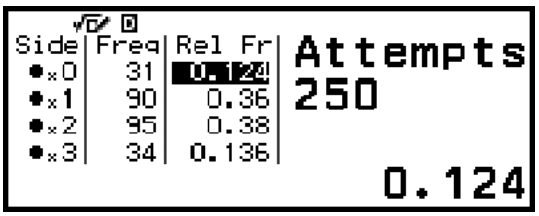

- To have multiple calculators display the same result, make sure that the settings below are identical on all of the calculators.
  - Number of dice or coins
  - Number of trials (rolls or tosses)
  - Same Result setting (#1, #2, or #3)

Coin Toss

Coin Toss performs a simulation of one, two, or three virtual coin tosses a specified number of times. You can select either of the following screens for the result.

List screen

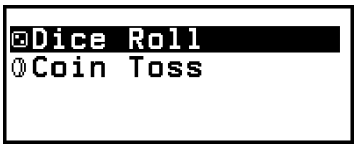

Relative Freq screen

The screen shows heads as ● and tails as ○.

Coin Toss General Operation Procedure

Example: To simulate 100 tosses of three coins. For this example, the Relative Freq screen is used for simulation results, showing the number of heads (0, 1, 2, 3) and the relative frequencies of heads of each toss.

1. Press ⌂, select the Math Box app icon, and then press OK.
   - This displays the Math Box menu.

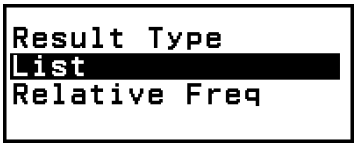

2. Select [Coin Toss], and then press OK.
   - This displays the parameter input screen.

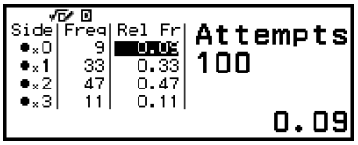

Coins: Select the number of coins as 1, 2, or 3.
Attempts: Input the number of coin tosses (number of trials) as a value from 1 to 250.
Same Result: This setting is normally Off (initial default setting). For details, see **"Same Result Setting" (page 79)**.

3. Select each of the menu settings and configure them the way you want.
   (1) Select [Coins] and then press [OK]. On the menu that appears, select [3 Coins] and then press [OK].
   (2) Select [Attempts] and then press [OK]. When the input screen appears, input 100 and then press [OK]. Select [Confirm] and then press [OK].
   (3) Leave the [Same Result] set to Off (initial default setting).
4. After all of the settings are the way you want, select [Execute] and then press [OK].
   • The screen showing execution of the simulation will appear, and then the screen will change to the Result Type menu.

List: Shows a list of heads or tails*1 for each toss (trial).
Relative Freq: Shows the number of occurrences for each coin that comes up heads,*2 and their relative frequencies.
*1 When there are two or three coins, shows the number of coins of each toss that come up heads.
*2 For two or three coins. When there is one coin, this shows the frequencies of heads and tails and the relative frequencies.

5. Use the Result Type menu to select a result display format.
   Here we want to display the number of occurrences and relative frequencies, so select [Relative Freq] and then press [OK].
   • The simulation result is shown on the Relative Freq screen.

(The result differs with each execution.)

   • For details about the simulation result screen, see **"Coin Toss Result Screen" (page 82)**.

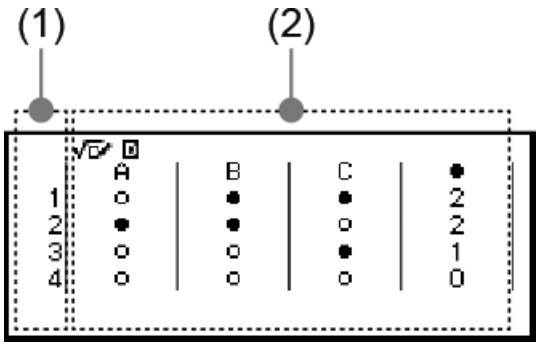

6. To display results using a different format, display the result screen and then press ⏎.
   • This returns to the Result Type menu, so you can repeat step 5 of this procedure and change the result display format.
7. If you want to perform a simulation with different settings, press ⏎ while the Result Type menu is displayed.
   • This clears the simulation result and returns to the parameter input screen. Perform the procedure again from step 3.
8. To exit Coin Toss, press ⏎ while the parameter input screen is displayed.
   • This returns to the Math Box menu.

Note

• On the Relative Freq screen, you can store the value in a Rel Fr column cell to a variable. For example, performing the following operation in step 5, above, will store the value in the first row of the "Rel Fr" column to variable A: 23 – [A=] > [Store].

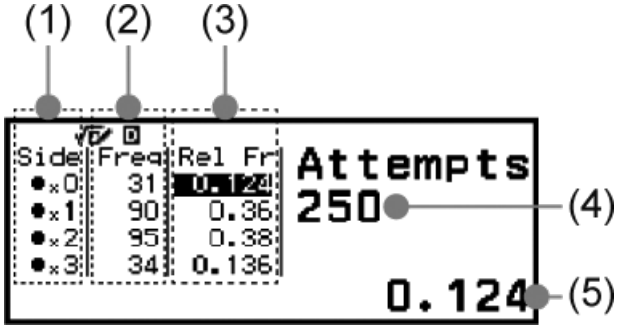

Coin Toss Result Screen

• List screen

(1) Each row shows a sequential toss number. For example, 1 is the first toss, 2 is the second toss, and so on.
(2) A, B, and C indicate each of the coins being used. When two coins or three coins are being used, the ● column on the right shows the number of coins that came up heads.

• Relative Freq screen

(1) Side: When using only one coin, "●" indicates heads while "○" indicates tails. When using two or three coins, this column shows the number of heads (0 to 3).
(2) Freq: Shows the number of occurrences (frequency) of each toss outcome.
(3) Rel Fr: Shows the relative frequency (frequency divided by number of tosses) of toss results.
(4) Number of trials
(5) Highlighted Rel Fr cell’s value

Technical Information

Errors

The calculator will display an error message whenever an error occurs for any reason during a calculation.

Displaying the Location of an Error

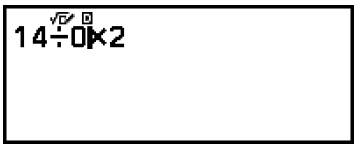

While an error message is displayed, pressing [OK], [⮌], or [AC] returns to the screen that was displayed immediately before the error message appeared. The cursor will be positioned at the location where the error occurred, ready for input. Make the necessary corrections to the calculation and execute it again.

Example: When you input 14 ÷ 0 × 2 by mistake instead of 14 ÷ 10 × 2.

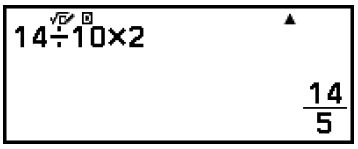

14 [÷] 0 [×] 2 [EXE]

[OK] (or [⮌] or [AC])

[<] 1 [EXE]

Error Messages

Syntax ERROR

Cause:

- There is a problem with the format of the calculation you are performing.

Action:

- Make necessary corrections.

Math ERROR

Cause:

- The intermediate or final result of the calculation you are performing exceeds the allowable calculation range.

- Your input exceeds the allowable input range (particularly when using functions).
- The calculation you are performing contains an illegal mathematical operation (such as division by zero).

Action:

- Check the input values, reduce the number of digits, and try again.
- When using a variable as the argument of a function, make sure that the variable value is within the allowable range for the function.

Stack ERROR

Cause:

- The calculation you are performing has caused the capacity of the numeric stack or the command stack to be exceeded.

Action:

- Simplify the calculation expression so it does not exceed the capacity of the stack.
- Try splitting the calculation into two or more parts.

Argument ERROR

Cause:

- There is a problem with the argument of the calculation you are performing.

Action:

- Make necessary corrections.

Range ERROR

Cause (Table app):

- An attempt to generate a number table in the Table app whose conditions cause it to exceed the maximum number of allowable rows.

Action:

- Narrow the table calculation range by changing the Start, End, and Step values, and try again.

Cause (Math Box app):

- The value input as the Attempts (number of trials) for Dice Roll or Coin Toss is outside the allowable range or is a non-integer value.

Action:

- For Attempts, input an integer value that is within the allowable range.

Circular ERROR ($f(x)$ and $g(x)$ feature only)

Cause:

- Circular reference is occurring in a registered composite function ("Registering a Composite Function" (page 52)).

Action:

- Do not have $g(x)$ input into $f(x)$, and $f(x)$ input into $g(x)$ at the same time.

Not Defined ($f(x)$ and $g(x)$ feature only)

Cause:

- You attempted to calculate $f(x)$ or $g(x)$ with $f(x)/g(x)$ undefined.

Action:

- Define $f(x)$ or $g(x)$ before calculating $f(x)/g(x)$.

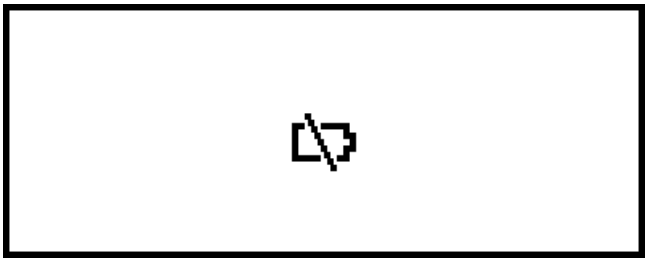

Before Assuming Malfunction of the Calculator...

Note that you should make separate copies of important data before performing these steps.

1. Check the calculation expression to make sure that it does not contain any errors.
2. Make sure that you are using the correct calculator app for the type of calculation you are trying to perform.
   - To check which calculator app you are currently using, press ⌂. This highlights the icon of the calculator app currently in use.
3. If the above steps do not correct your problem, press the ⏻ key.
   - This causes the calculator to perform a routine that checks whether calculation functions are operating correctly. If the calculator discovers any abnormality, it automatically initializes the calculator app and clears memory contents.
4. Return the calculator settings (except for Contrast and Auto Power Off) to their initial default settings by performing the procedure below.
   (1) Press ⌂, select a calculator app icon, and then press OK.
   (2) Press ☰, and then select [Reset] > [Settings & Data] > [Yes].

Replacing the Battery

If the screen shown below appears right after you turn on power, it means that remaining battery power is low.

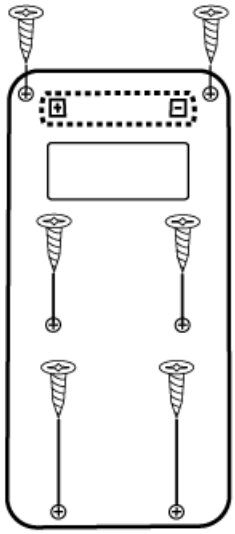

A low battery is also indicated by a dim display, even if contrast is adjusted, or by failure of figures to appear on the display immediately after you turn on the calculator.
If this happens or the above screen appears, replace the battery with a new one.

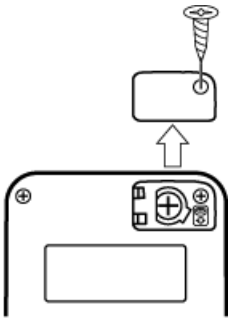

Important!

- Removing the battery causes all of the calculator's memory contents to be cleared.

1. Press ⓈⒶⒸ(OFF) to turn off the calculator.
   - To ensure that you do not accidentally turn on power while replacing the battery, attach the front cover to the front of the calculator.
2. As shown in the illustration, remove the battery cover, remove the battery, and then load a new battery with its plus (+) and minus (−) ends facing correctly.

fx-82CW/fx-350CW

fx-85CW

3. Replace the battery cover.
4. Press ⏻ to turn on the calculator.
5. Initialize the calculator.
   (1) Press ⌂, select a calculator app icon, and then press ⓄⓀ.
   (2) Press ☰, and then select [Reset] > [Initialize All] > [Yes].
   - Do not skip the above steps!

Calculation Priority Sequence

The calculator performs calculations according to a calculation priority sequence.

- Basically, calculations are performed from left to right.
- Expressions within parentheses have the highest priority.
- The following shows the priority sequence for each individual command.

1	Parenthetical expressions
2	Functions that have parentheses (sin(, log(, f(, g(, etc., functions that take an argument to the right, functions that require a closing parenthesis after the argument)
3	Functions that come after the input value (x^2, x^{-1}, $x!$, °’ ”, °, ^{r}, ^{g}, %), powers ($x^{\blacksquare}$), roots ($\sqrt[\blacksquare]{\square}$)
4	Fractions
5	Negative sign ((-))
6	Statistics app estimated values ($\hat{x}$, $\hat{y}$, $\hat{x}_1$, $\hat{x}_2$)
7	Multiplication where the multiplication sign is omitted
8	Permutation (nPr), combination (nCr)
9	Multiplication (×), division (÷)
10	Addition (+), subtraction (−)

If a calculation contains a negative value, you may need to enclose the negative value in parentheses. If you want to square the value -2, for example, you need to input: $(-2)^2$. This is because x^2 is a function preceded by a value (Priority 3, above), whose priority is greater than the negative sign, which is a prefix symbol (Priority 5).

Example:

(-)((-))2x^2EXE $-2^2 = -4$

((-))2)x^2EXE $(-2)^2 = 4$

Calculation Ranges, Number of Digits, and Precision

The calculation range, number of digits used for internal calculation, and calculation precision depend on the type of calculation you are performing.

Calculation Range and Precision

Calculation Range	$\pm 1 \times 10^{-99}$ to $\pm 9.999999999 \times 10^{99}$ or 0
Number of Digits for Internal Calculation	23 digits
Precision	In general, ±1 at the 10th digit for a single calculation. Precision for exponential display is ±1 at the least significant digit. Errors are cumulative in the case of consecutive calculations.

Function Calculation Input Ranges and Precision

Functions	**Input Range**	
$\sin x$ $\cos x$	Degree	$0 \le \lvert x \rvert < 9 \times 10^{9}$
	Radian	$0 \le \lvert x \rvert < 157079632.7$
	Gradian	$0 \le \lvert x \rvert < 1 \times 10^{10}$
$\tan x$	Degree	Same as $\sin x$, except when $\lvert x \rvert = (2n - 1) \times 90$.
	Radian	Same as $\sin x$, except when $\lvert x \rvert = (2n - 1) \times \pi/2$.
	Gradian	Same as $\sin x$, except when $\lvert x \rvert = (2n - 1) \times 100$.
$\sin^{-1} x$, $\cos^{-1} x$	$0 \le \lvert x \rvert \le 1$	
$\tan^{-1} x$	$0 \le \lvert x \rvert \le 9.999999999 \times 10^{99}$	
$\sinh x$, $\cosh x$	$0 \le \lvert x \rvert \le 230.2585092$	

$\sinh^{-1}x$	$0 \le \lvert x \rvert \le 4.999999999 \times 10^{99}$
$\cosh^{-1}x$	$1 \le x \le 4.999999999 \times 10^{99}$
$\tanh x$	$0 \le \lvert x \rvert \le 9.999999999 \times 10^{99}$
$\tanh^{-1}x$	$0 \le \lvert x \rvert \le 9.999999999 \times 10^{-1}$
$\log x$, $\ln x$	$0 < x \le 9.999999999 \times 10^{99}$
10^x	$-9.999999999 \times 10^{99} \le x \le 99.99999999$
$\sqrt{x}$	$0 \le x < 1 \times 10^{100}$
x^2	$\lvert x \rvert < 1 \times 10^{50}$
x^{-1}	$\lvert x \rvert < 1 \times 10^{100}$; $x \ne 0$
$x!$	$0 \le x \le 69$ (x is an integer)
${}_nP_r$	$0 \le n < 1 \times 10^{10}$, $0 \le r \le n$ (n, r are integers) $1 \le \{n!/(n - r)!\} < 1 \times 10^{100}$
${}_nC_r$	$0 \le n < 1 \times 10^{10}$, $0 \le r \le n$ (n, r are integers) $1 \le n!/r! < 1 \times 10^{100}$ or $1 \le n!/(n - r)! < 1 \times 10^{100}$
Pol(x, y)	$\lvert x \rvert$, $\lvert y \rvert \le 9.999999999 \times 10^{99}$ $\sqrt{x^2 + y^2} \le 9.999999999 \times 10^{99}$
Rec(r, θ)	$0 \le r \le 9.999999999 \times 10^{99}$ θ: Same as $\sin x$
$a°b'c"$	$\lvert a \rvert$, b, $c < 1 \times 10^{100}$; $0 \le b$, c The display seconds value is subject to an error of ±1 at the second decimal place.
$a°b'c" = x$	0°0’0” ≤ $\lvert x \rvert$ ≤ 9999999°59’59” A sexagesimal value outside of the above range is automatically treated as a decimal value.
x^y	$x > 0$: $-1 \times 10^{100} < y \log x < 100$ $x = 0$: $y > 0$ $x < 0$: $y = n, \frac{m}{2n + 1}$ (m, n are integers) However: $-1 \times 10^{100} < y \log \lvert x \rvert < 100$

$\sqrt[x]{y}$	$y > 0$: $x \neq 0$, $-1 \times 10^{100} < 1/x \log y < 100$ $y = 0$: $x > 0$ $y < 0$: $x = 2n + 1$, $\frac{2n+1}{m}$ ($m \neq 0$; m, n are integers) However: $-1 \times 10^{100} < 1/x \log \lvert y \rvert < 100$
$a\ {}^{b}/_{c}$	Total of integer, numerator, and denominator must be 10 digits or less (including separator symbol).
RanInt#(a, b)	$a < b$; $\lvert a \rvert$, $\lvert b \rvert < 1 \times 10^{10}$; $b - a < 1 \times 10^{10}$

- Precision is basically the same as that described under "Calculation Range and Precision", above.
- x^y, $\sqrt[x]{y}$, $x!$, $n\mathrm{P}r$, $n\mathrm{C}r$ type functions require consecutive internal calculation, which can cause accumulation of errors that occur with each calculation.
- Error is cumulative and tends to be large in the vicinity of a function's singular point and inflection point.
- The range for calculation results that can be displayed in π form when MathI/MathO is selected for Input/Output on the SETTINGS menu is $\lvert x \rvert < 10^6$. Note, however, that internal calculation error can make it impossible to display some calculation results in π form. It also can cause calculation results that should be in decimal form to appear in π form.

Specifications

fx-82CW/fx-350CW

Power Requirements:
AAA-size battery R03 × 1

Approximate Battery Life:
2 years (based on one hour of operation per day)

Power Consumption:
0.0008 W

Operating Temperature:
0°C to 40°C (32°F to 104°F)

Dimensions:
13.8 (H) × 77 (W) × 162 (D) mm
$^{9}/_{16}$" (H) × 3 $^{1}/_{16}$" (W) × 6 $^{3}/_{8}$" (D)

Approximate Weight:
100 g (3.5 oz) including the battery

fx-85CW

Power Requirements:
Built-in solar cell; button battery LR44 × 1

Approximate Battery Life:
2 years (based on one hour of operation per day)

Operating Temperature:
0°C to 40°C (32°F to 104°F)

Dimensions:
10.7 (H) × 77 (W) × 162 (D) mm
$^{7}/_{16}$” (H) × 3 $^{1}/_{16}$” (W) × 6 $^{3}/_{8}$” (D)

Approximate Weight:
95 g (3.4 oz) including the battery

Frequently Asked Questions

Frequently Asked Questions

■ How can I change a fraction form result produced by a division operation to decimal form?

→ While a fraction calculation result is displayed, press [FORMAT] and then select [Decimal], or press [SHIFT] [EXE] (≈). To have calculation results initially appear as decimal values, change the Input/Output setting on the SETTINGS menu to MathI/DecimalO.

■ What is the difference between Ans memory and variable memory?

→ Each of these types of memory acts like "containers" for temporary storage of a single value.

Ans Memory: Stores the result of the last calculation performed. Use this memory to carry the result of one calculation on to the next.

Variables: This memory is helpful when you need to use the same value multiple times in one or more calculations.

■ How can I find a function I was using with an older CASIO calculator model on this calculator?

→ This calculator's functions can be accessed from the CATALOG menu that appears when you press [CATALOG]. For details, see the sections below.

"Using the CATALOG Menu" (page 22)
"Advanced Calculations" (page 43)

■ With an older CASIO calculator model, I pressed [S⇔D] to change the calculation result display format. What should I do with this calculator?

→ While a calculation result is displayed, press [FORMAT]. Use the menu that appears to select the display format you want. For details, see "Changing Calculation Result Format" (page 36).

■ How can I find out which calculator app I am currently using?

→ Press [HOME]. This causes the icon of the calculator app you are currently using to become highlighted.

■ How do I calculate $\sin^2 x$

→ For example, to calculate $\sin^2 30 = \frac{1}{4}$, enter the calculation below.

[sin] 30 [)] [x^2] [EXE]

■ Why does the battery icon (🪫) appear right after the calculator is turned on?

→ The battery icon indicates that battery power is low. If you see this icon, replace the battery as soon as possible. For details about battery replacement, see **"Replacing the Battery" (page 86)**.

■ How can I return the calculator to its initial default settings?

→ Perform the procedure below to initialize calculator settings (except for Contrast and Auto Power Off).

(1) Press ⌂, select a calculator app icon, and then press OK.

(2) Press ☰, and then select [Reset] > [Settings & Data] > [Yes].
